1. Introduction

Please note: 9xx including all models:

UC601/ UC901/ UC902/ UC903/ UC912/ UC912G/ UC912GM/ UC923/ UC924/ UC924E/
UC926/ UC926E

Htek IP Phone could be plugged directly into an IP network and be used without any manual configuration.

This guide provides instructions on how to provision Htek IP Phone with the minimum settings. Htek IP Phone supports FTP, TFTP, HTTP, and HTTPS for auto provisioning and are configured by default to use the HTTP.

This guide is a basic guidance for provisioning on Htek IP phones, including the models: Htek UC601/ UC901/ UC902/ UC903/ UC912/ UC912G/ UC912GM/ UC923/ UC924/ UC924E/ UC926/ UC926E

Note:The auto provision just applies to FW 1.0.3.70 or FW after 1.0.3.70. For the latest FW, please download from our website www.htek.com.

2. Manage Configuration

Htek IP Phone could be configured via Web Interface and via Configuration File that download through TFTP/FTP/HTTP/HTTPS. All devices support a configuration file in proprietary binary format. Products like UC9xx, Unicorn3xxx and Unicorn6xxx accept configuration files in XML format in legacy proprietary binary format. The XML provisioning implementation also allows generic XML configuration file on top of the MAC based configuration file.

When Htek IP Phone boots up or reboots, it will issue a request for these configuration files named "factory000x.bin" --> "cfg000x.xml" --> "cfgMAC" --> "cfgMAC.xml", in which "000x" is the Device Code. Take UC924 for example, the configuration file name should be factory0012.xml. You can refer to the <<Device Type and file list>>. This "MAC" is the device Mac address, for example "cfg001fc10608ab". The configuration file name should be in lower case. The file "cfgMAC" is a proprietary binary format configuration file that must be generated by Htek configuration tools.

Device type, Device code and file list:

Device Type	Device Code	Device file
UC601	0111	factory0111.bin/cfg0111.xml
UC901	0018	factory0018.bin/cfg0018.xml
UC902	0017	factory0017.bin/cfg0017.xml
UC903	0016	factory0016.bin/cfg0016.xml

UC912/UC912G/ UC912GM	0019	factory0019.bin/cfg0019.xml
UC923	0013	factory0013.bin/cfg0013.xml
UC924	0012	factory0012.bin/cfg0012.xml
UC924E	0112	factory0112.bin/cfg0112.xml
UC926	0010	factory0010.bin/cfg0010.xml
UC926E	0110	factory0110.bin/cfg0110.xml

Process of Htek products are as follows:

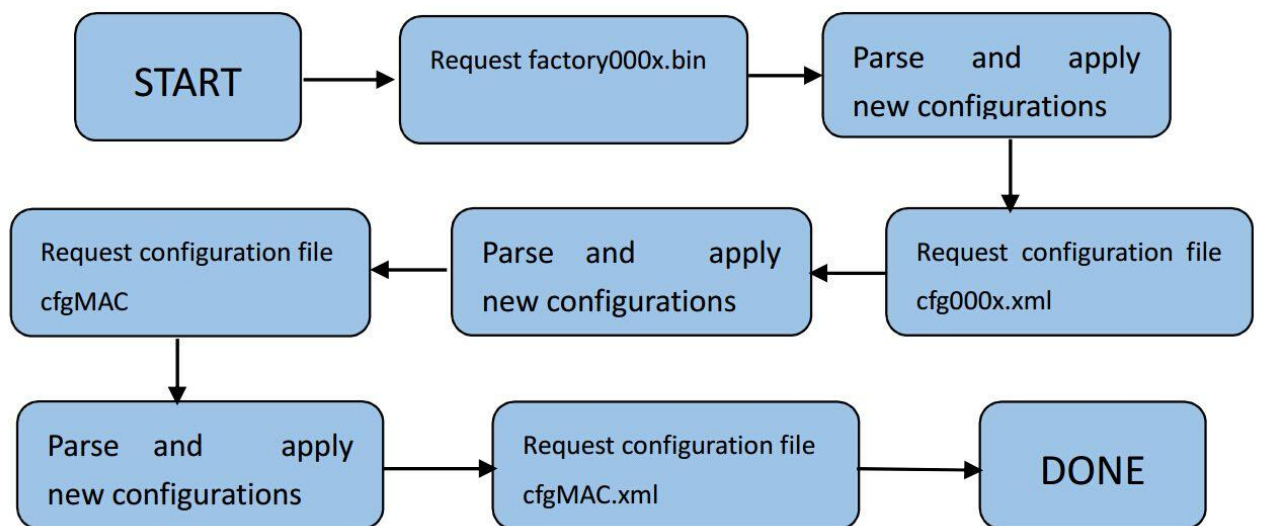

factory000x.bin -----used for factory default configuration for ODM/OEM

cfg000x.xml ----- used for update the common configuration which doesn't include the account information.

cfg001fc1xxxxx ---- this file is a private format for each device

cfg001fc1xxxxx.xml-----used for configuration for each device. xml format

Provisioning Flow Chart:

Picture 1: Provisioning Flow Chart

Note: The provisioning program will apply and reload the settings after downloading the new configuration files. It means that a provision/re-direction server can redirect the device to a provision server without reboot. It can also be used to send the XML encryption password.

If factory000x.bin file does not download successfully, the provision program will download the cfg000x.xml file, or download the cfgMAC file. If the cfgMAC file does not download successfully, the provision program will download the cfgMAC.xml file.

2.1 Obtain configuration files

Before provisioning, first you need to obtain the configuration file. There are three CFG template files, `cfg000x.xml`, `cfg$mac` and `cfgMAC.xml`. The `cfg000x.xml` is a common configuration file which doesn't include the account information. The "mac" only takes effect for specific phone. The file name is the 12-digit mac address of phone. For example, if the phone's mac address is 001fc11a0012, the `cfg$mac` file name must be `cfg001fc11a0012`; The `cfgMAC.xml` file name must be `cfg001fc11a0012.xml`.

The phone will try to download these CFG files from the server during provisioning.

Note: The IP Phones that in FW 1.0.3.70 or FW after 1.0.3.70 would only recognize CFG files which use UTF-8 or ANSI encoding.

2.2 Obtain phone information

Before provisioning, you need the phone information, like MAC address, SIP account of the phone.

MAC Address: The unique 12-digit serial number of the phone. You can obtain it from the back of the phone.

SIP Account Information: It may include SIP credentials, like user name, password and IP address of the SIP server. Contact your system administrator for SIP account information.

2.3 Manage configuration files

Auto provision enables Htek IP Phone to update automatically via downloading configuration files. Before provisioning, you may need to edit and customize your configuration file which is composed of many configuration parameters. A configuration parameter is associated with particular field in the web configuration page. A parameter consists of a Capital letter P and 2 to 5 digit numeric numbers. i.e., P2 is associated with "Admin Password" in the Advanced Page. For detailed parameter list, please refer to [<<parameter list>>](#) in page 68.

2.4 How to edit `cfg000x.xml` file

You can customize configuration parameters by editing XML configuration file "`cfg000x.xml`", and different device would use different file name. you can refer to [<< How to Edit `cfg000x.xml`>>](#) in page 40.

2.5 How to edit `cfg$mac` file

`Cfg$mac` file is a binary format configuration. It contains configuration parameters which

apply to all phone models.

The line beginning with “#” is considered to be the annotation, and easy to understand each P value.

The parameters commonly edited in the `cfg$mac` file are described as follows:

```
#####  
#####  
## Configuration template for UC924 firmware version 1.0.3.70  
#####  
#####  
#####  
#####  
# Account Settings  
#####  
#####  
#-----  
# Account 1--basic setting  
#-----  
  
# Account Active (In Use). 0 - No, 1 - Yes  
# Number: 0, 1  
# Mandatory  
P271 = {$line_active.line.1|1}  
  
# Primary SIP Server(eg:sip.mycompany.com or IP address)  
# String  
P47 = {$server_host.line.1}  
  
# Failover SIP Server(Optional, used when primary server no response)  
# String  
P967 =  
  
# Second Failover SipServer(Optional, used when Failover SIP Server no response)  
P8851 =  
  
# Prefer Primary SIP Server(Yes-will register to Primary SIP Server if Failover registration  
expires )  
# Prefer Primary SIP Server (In Use). 0 - No, 1 - Yes  
# Number: 0, 1  
# Mandatory  
P4567 = 0  
  
# Outbound Proxy(proxy.myprovider.com, or IP address, if any)  
# string  
P48 =
```

Backup Outbound Proxy(This is Usually Set as IP addr)
P20047 =

SIP Transport
0 - UDP, 1 - TCP, 2 - TLS
P130 = 0

NAT Traversal. 0 - No, 1 - STUN 2 - No,but send keep alive
#Number: 0-2
Mandatory
P52 = 2

Label(This name will be displayed on the device's LCD)
P20000=

SIP User ID
P35 = {\$username.line.1}

Authenticate ID
P36 = {\$username.line.1}

Authenticate password
P34 = {\$secret.line.1}

Name
P3 = {\$displayname.line.1}

DNS Mode. 0 - A Record, 1 - SRV, 2 - NAPTR/SRV
Number: 0-2
Mandatory
P103 = 0

User ID Is Phone Number.0 - No, 1 - Yes
Number:0, 1
P63 = 0

SIP Registration. 0 - No, 1 - Yes
Number:0, 1
Mandatory
P31 = 1

Unregister On Reboot.0 - No, 1 - Yes
Number:0, 1

Mandatory

P81 = 1

Register Expiration(in minutes. default 1 hour, max 45 days)

P32 = 15

Outgoing Call Without Registration.0 - No, 1 - Yes

Number:0, 1

Mandatory

P109 = 1

Local SIP Port(default 5060)

P40 = 5060

Use Random Port.0 - No, 1 - Yes

Number:0, 1

Mandatory

P78 = 0

Voice Mail UserID(UserID for voice mail system)

P33 =

RPort.0 - No, 1 - Yes

P136 = 0

RFC 2543 Hold.0 - No, 1 - Yes

P1100 = 1

We offer free Configuration File generator software in both Linux/Unix and Windows platform.

You can refer to [<< Generate Configuration Files with HLLiteTool >>](#) in the page 45.

2.6 How to edit cfgMAC.xml file

General XML syntax consists of a list of name-value pairs. P-Value is the element and value of the element represents the value for a particular configuration which P-Value represents corresponding.

Method 1:

You need to download cfg.xml file from IP Phone webpage(Management->Configuration ->Download xml file) or download this cfgMAC.xml file from website www.htek.com, then change the file name to cfgMAC.xml(mac is IP Phone address), and open the cfgMAC.xml, See the below screen shot:

```
<?xml version="1.0" encoding="UTF-8" ?>
<hl_provision version="1">
  <config version="1">
    <!--Account1/Basic-->
    <P271 para="Account1.Active">1</P271>
    <P47 para="Account1.Sipserver" />
    <P967 para="Account1.FailoverSipserver" />
    <P8851 para="Account1.SecondFailoverSipserver" />
    <P4567 para="Account1.PreferPrimaryServer">0</P4567>
    <P48 para="Account1.OutboundProxy" />
    <P20047 para="Account1.BackUpOutboundProxy" />
    <P130 para="Account1.SipTransport">0</P130>
    <P52 para="Account1.NatTraversal">2</P52>
    <P20000 para="Account1.Lable" />
    <P35 para="Account1.SipUserId" />
    <P36 para="Account1.AuthenticateID" />
    <P34 para="Account1.AuthenticatePassword" />
    <P3 para="Account1.DispalyName" />
    <P103 para="Account1.DnsMode">0</P103>
    <P63 para="Account1.UserIdIsPhoneNumber">0</P63>
    <P31 para="Account1.SipRegistration">1</P31>
    <P81 para="Account1.UnregisterOnReboot">0</P81>
    <P32 para="Account1.RegisterExpiration">15</P32>
    <P109 para="Account1.OutCallWithoutReg">1</P109>
    <P40 para="Account1.LocalSipPort">5060</P40>
    <P78 para="Account1.UseRandomPort">0</P78>
    <P33 para="Account1.VoiceMailId" />
    <P136 para="Account1.RPort">0</P136>
    <P1100 para="Account1.RFC2543Hold">1</P1100>
    <P8775 para="Account1.ConnectMode">0</P8775>
```

The parameters edited in the cfgMAC.xml file are described as follows:

```
<?xml version="1.0" encoding="UTF-8" ?>
<hl_provision version="1">
  <config version="1">
    <!--Account1/Basic-->
    <P271 para="Account1.Active">1</P271>
    <P47 para="Account1.Sipserver" />
    <P967 para="Account1.FailoverSipserver" />
    <P8851 para="Account1.SecondFailoverSipserver" />
    <P4567 para="Account1.PreferPrimaryServer">0</P4567>
    <P48 para="Account1.OutboundProxy" />
    <P20047 para="Account1.BackUpOutboundProxy" />
    <P130 para="Account1.SipTransport">0</P130>
    <P52 para="Account1.NatTraversal">2</P52>
    <P20000 para="Account1.Lable" />
    <P35 para="Account1.SipUserId" />
```

```
<P36 para="Account1.AuthenticateID" />
<P34 para="Account1.AuthenticatePassword" />
<P3 para="Account1.DispalyName" />
<P103 para="Account1.DnsMode">0</P103>
<P63 para="Account1.UserIdsPhoneNumber">0</P63>
<P31 para="Account1.SipRegistration">1</P31>
<P81 para="Account1.UnregisterOnReboot">0</P81>
<P32 para="Account1.RegisterExpiration">15</P32>
<P109 para="Account1.OutCallWithoutReg">1</P109>
<P40 para="Account1.LocalSipPort">5060</P40>
<P78 para="Account1.UseRandomPort">0</P78>
<P33 para="Account1.VoiceMailld" />
<P136 para="Account1.RPort">0</P136>
<P1100 para="Account1.RFC2543Hold">1</P1100>
<P8775 para="Account1.ConnectMode">0</P8775>
```

You can edit the value in `<></>`field.

For example: The phone's SIP Server is 192.168.0.100, you need to edit the `<P47 para="Account1.Sipserver">192.168.0.100</P47>`.

If you want to configure others, for example:

`<P48 para="Account1.OutboundProxy" />` , you need to change it as

`<P48 para="Account1.OutboundProxy"></P48>` , only in this way you

can change the value.

Method 2:

Login phone webpage, configure each item you want (like, account information, programmable keys, firmware upgrade path...). Management ->Configuration, download XML file, then change the name to cfgMAC.xml.

3. Encrypt Configuration Files

Htek Configuration Generator allows user to encrypt the generated configuration file with AES 128-bit encryption. It allows user to choose not to encrypt the configuration file in Windows version, but it is recommended to use encryption for security reason.

3.1 How to encrypt the XML configuration file

The XML configuration file could be encrypted in AES-128-CBC algorithm. The encryption password is defined in P8631 (Management->Auto Provision->Set Common AES Key) of the configuration file.

Set Common AES Key

The Password length is from 1-16, and password must be [0-9, A-F]

THE SHARED IV: 0B1E1D000F0B07091D1F04071F1E0407

The OpenSSL command-line to encrypt the file is as follows:

Openssl enc -e -aes-128-cbc -K <password>-iv

0B1E1D000F0B07091D1F04071F1E0407 -in cfg.xml -out cfgxxxxxxxxxxx.xml

When the XML configuration file is encrypted in this method, Phone would only be able to decrypt and parse the file if user set the XML Config File Password in P8631 of binary configuration file or in the web UI.

Detailed steps:

Step 1: Login webpage, click Management→Configuration, download cfg.xml file, then run, input” Openssl enc -e -aes-128-cbc -K<password>-iv

0B1E1D000F0B07091D1F04071F1E0407 -in cfg.xml -out Cfgxxxxxxxxxxx.xml”

(xxxxxxxxxxx is the MAC address)

```
[root@WilliamFedora test]# ll
total 36
-rwxr--r--. 1 nobody nobody 34454 2014-03-27 11:12 cfg.xml
[root@WilliamFedora test]# openssl enc -e -aes-128-cbc -K 1234567890 -iv 0B1E1D000F0B07091D1F04071F1E0407 -
in cfg.xml -out Cfg001fc11a96f4.xml
[root@WilliamFedora test]#
```

THE SHARED IV: 0B1E1D000F0B07091D1F04071F1E0407

Step 2: Put the Cfgxxxxxxxxxxx.xml under upgrade server path

Step 3: You must set the AES Key: Management→Auto Provision: AES Key:

Upgrade Check Mode :

- Always Check For New Firmware
- check new firmware only when F/W pre/suffix changes
- Always Skip The Firmware Check

Authenticate Cfg File No Yes [?](#)

Set Common AES Key

4. Customize Resource Files

Htek IP Phone allows to customize some resource files, like ring tone file, language package file and logo files. For how to customize resource files, as follows:

4.1 Customize ring tone

Htek IP Phone has several factory-default ring tones (Ring1, Ring2, Ring3). You can customize Ring4, Ring5, Ring6, Ring7 and Ring8 tone and upload them to the phone via auto provisioning.

You can change the ring tone configuration parameter to personalize ring tone:

For example: P8721 = 8

```
# Ring Tones
# 0 - default, 1 - Ring1.bin, 2 - Ring2.bin
# 3 - Ring3.bin, 4 - Ring4.bin, 5 - Ring5.bin
# 6 - Ring6.bin, 7 - Ring7.bin, 8 - Ring8.bin
P8721 = 8
```

For more information on customizing ring tone file, please refer to [<<Making Ringtone Notes>>](#) in page 53.

4.2 Customize LCD language

Htek IP Phone supports multiple language, you can modify the language and add a new language to the phone. The following table lists all available languages, associated language files and language template file:

Available language	Associated language files	Language template file
English	(Default, can't be customized)	LCD_English_Template.xml
French	1_Français(French).xml	
German	2_Deutsch(German).xml	
Spanish	3_Español(Spanish).xml	
Portuguese	4_Português(Portuguese).xml	
Russian	5_русский(Russian).xml	
Italian	6_Italiano(Italian).xml	
Polish	7_Polski(Polish).xml	
Turkish	8_Türk(Turkish).xml	
Serbian	9_Srpski(Serbian).xml	
ChinesSimplified	10_简体中文(ChineseSimplified).xml	

ChineseTraditional	11_繁體中文(ChineseTraditional).xml	
Slovenian	13_Slovenščina(Slovenian).xml	
Persian	14_Persian(Farsi).xml	
Hebrew	15_עברית(Hebrew).xml	
Slovak	16_Slovak.xml	
Czech	17_Czech.xml	
JapaneseSimplified	18_日本語(JapaneseSimplified).xml	
Dutch	19_Nederlands(Dutch).xml	

Below picture shows a portion of LCD_English_Template.xml file:

```

LCD_English_Template.xml
1  <?xml version="1.0" encoding="UTF-8"?>
2  <language name="English (English) ">
3      <Back>Back</Back>
4      <Option>Option</Option>
5      <Send>Send</Send>
6      <Enter>Enter</Enter>
7      <Delete>Delete</Delete>
8      <Cancel>Cancel</Cancel>
9      <OK>OK</OK>
10     <Edit>Edit</Edit>
11     <Dial>Dial</Dial>
12     <Switch>Switch</Switch>
13     <Save>Save</Save>
14     <Exit>Exit</Exit>
15     <None>None</None>
16     <Empty>Empty</Empty>
17     <Add>Add</Add>
18     <Confirm>Confirm</Confirm>
19     <MainMenu>MainMenu</MainMenu>
20     <Status>Status</Status>
21     <Features>Features</Features>

```

English is the default language, you can change configuration parameter to other languages:

```

# LCD Language (Choose the LCD language)
# 0 - English, 1 - French, 2 - German, 3 - Spanish, 4 -
Portuguese, 5 - Russian, 6 - Italian, 7 - Polish, 8 -
Turkish, 9 - Serbian, 10 - ChineseSimplified, 11 -
ChineseTraditional, 13 - Slovenian, 14 - Farsi, 15 - Hebrew,
16 - Slovak, 17 - Czech, 18 - JapaneseSimplified, 19 - Dutch
P8621 = 0

```

For more information on customizing an LCD language, please refer to [<<LCD Language custom guide>>](#) in page 56.

4.3 Customize web language

Htek IP Phone supports multiple language,you can modify the language and add a new language to the phone’s webpage. The following table lists all available languages, associated language files and language template file:

Available language	Associated language files	Language template file
English	(Default, can't be customized)	Web_English_Template.js
French	1_French.js	
German	2_German.js	
Spanish	3_Spanish.js	
Portuguese	4_Portuguese.js	
Russian	5_Russian.js	
Italian	6_Italian.js	
Polish	7_Polish.js	
Turkish	8_Turkish.js	
ChineseSimplified	10_ChineseSimplified.js	
ChineseTraditional	11_ChineseTraditional.js	
Dutch	19_Dutch.js	

Below picture shows a portion of Web_English_Template.js file:

```

Web_English_Template.js
1  /*
2  <script>document.write(jscs.str_in_webpage);</script>
3  */
4  /*NOTE: Please add phrase at the end of this file, so that our
   client can translate new added phrase */
5  jscs = {
6      "logout":"logout",
7      "statusstatu":"Home",// "Status",
8      "account":"Account",
9      /*ata*/
10     "fxs_port":"FXS Port",
11     "fxo_port":"FXO Port",
12     "fxs":"FXS",
13     "fxo":"FXO",
14     "fxs1":"FXS 1",
15     "fxs2":"FXS 2",
16     "fxo1":"FXO 1",
17     "fxo2":"FXO 2",
18     "fax_mode":"Fax Mode",
19     "T38":"T38",
20     "pass_through":"Pass Through",
21     "off_hook_dial": "Offhook Auto-Dial",
22     "fax_tone_detect": "Fax Tone Detect Mode",
23     "bell_style_conference":"Use Bell-style 3-way Conference",
24     "DistinctiveRingTone":"Distinctive Ring Tone",
25     "caller_id":"Caller Number:",

```

English is the default language, you can change configuration parameter to other languages:

```
# Web Language (Choose the webpage language)
# 0 - English, 1 - French, 2 - German, 3 - Spanish, 4 - Portuguese, 5 - Russian, 6 - Italian, 7 - Polish, 8 - Turkish, 10 - ChineseSimplified, 11 - ChineseTraditional, 19 - Dutch
P2525 = 0
```

For more information on customizing web language file, please refer to [<< Web Language custom guide>>](#) in page 58.

4.4 Customizing wallpaper

You can customize Htek UC923/UC924/UC926 IP phones' wallpaper.

Below table shows wallpaper's format and resolution for UC923/UC924/UC926 IP phones:

Phone model	Photo format	Resolution	One file size	Photo number
UC923	.jpg, .bmp	320*240	<=2M	3
UC924	.jpg, .bmp	480*320	<=2M	3
UC924E	.jpg, .bmp	480*320	<=2M	3
UC926	.jpg, .bmp	480*272	<=2M	3
UC926E	.jpg, .bmp	480*272	<=2M	3

Wallpaper2 is default wallpaper, you can change configuration parameter to other wallpaper:

```
# Wallpaper
# 0 -Wallpaper1,1 -Wallpaper2,2 -Wallpaper3,3 -Wallpaper4,4 -Wallpaper5,5 -Wallpaper6
P8660 = 1
```

For more information on customizing wallpaper, please refer to [<<LCD and Web GUI custom Guide >>](#) in page 60.

4.5 Customizing screensaver

You can customize Htek UC923/UC924/UC926 IP phones' screensaver.

Below table shows screensaver's format and resolution for UC923/UC924/UC926 IP phones:

Phone model	Photo format	Resolution	One file size	Photo number
UC923	.jpg, .bmp	320*240	<=2M	3
UC924	.jpg, .bmp	480*320	<=2M	3
UC924E	.jpg, .bmp	480*320	<=2M	3
UC926	.jpg, .bmp	480*272	<=2M	3
UC926E	.jpg, .bmp	480*272	<=2M	3

Screensaver default is Off, you can change configuration parameter to activate the

Screensaver :

```
# ScreenSaver Type  
# 0 - time & logo, 1 - photo switch, 2 - ScreenSaver Photo1, 3 -ScreenSaver Photo2, 4 -ScreenSaver Photo3  
P8950 = 0
```

For more information on customizing screensaver, please refer to [<<LCD and Web GUI custom Guide >>](#) in page 61.

4.6 Customizing weblogo

You can customize Htek all phone models' weblogo on webpage.

Phone model	Photo format	Resolution	File size
UC601/UC901/UC902/UC903/UC912/ UC912G/UC912GM/UC923/UC924/U C924E/UC926/UC926E	.jpg	225*93	<=2M

For more information on customizing weblogo, please refer to [<< LCD and Web GUI custom Guide >>](#) in page 61.

5. Upgrade resource files

Htek IP phone supports upgrade resource files through URL (support HTTP(s) server). The files contain hlpres.tar, Language.tar, ring4.bin, ring5.bin, ring6.bin, ring7.bin, ring8.bin, exp_pres.tar, Screensaver and Wallpaper. For how to configure these files URL as follow:

5.1 How to configure URL for hlpres.tar

You can change the hlpres server configuration parameter to locate the file:
P20176=http(s)://192.168.0.254/hlpres.tar

5.2 How to configure URL for Language.tar

You can change the Language server configuration parameter to locate the file:
P20175=http(s)://192.168.0.254/Language.tar

5.3 How to configure URL for exp_pres.tar

You can change the exp_pres server configuration parameter to locate the file:
P20177=http(s)://192.168.0.254/exp_pres.tar

5.4 How to configure Path for ringx.bin

You can change the Ring server configuration Path, and IP Phone will get the files: ring4.bin, ring5.bin, ring6.bin, ring7.bin, ring8.bin automatically:

P20174=http(s)://192.168.0.254

5.5 How to configure URL for Screensaver

This parameter is only applicable to UC923, UC924, UC924E, UC926, UC926E.

You can change the Screensaver server configuration to locate the file:

P20051=http(s)://192.168.0.254/Screensaver.jpg

Note: 1. Screensaver file phone gets from server will cover the screensaver photo1 .
2. Only support format .jpg, .bmp.

5.6 How to configure URL for Wallpaper

You can change the Wallpaper server configuration to locate the file:

P20052=http(s)://192.168.0.254/wallpaper.jpg

Note: 1. Wallpaper file phone gets from server will cover the wallpaper6 .
2. Only support format .jpg, .bmp.

6. Upgrade Firmware

Version number and support files list:

1.0.3.58-1.0.3.72	1.0.3.73 or later
boot_9xx.bin img_9xx.bin hlpres.tar Language.tar ring4.bin ring5.bin ring6.bin ring7.bin ring8.bin	fw9xx.rom

Note:

When the phone which version is 1.0.3.71 or older upgrade to 1.0.3.73, phone will upgrade img_9xx.bin then automatically upgrade fw9xx.rom. fw9xx.rom is all-in-one firmware file. After upgrading to the 1.0.3.73 firmware, in the next time, phone will only need upgrade one file fw9xx.rom.

6.1 Configuring HTTP Server

Htek IP Phone supports using FTP, TFTP, HTTP and HTTPS protocols to obtain the address of provision server. Default way is HTTP. For how to configure a HTTP server, as follows:

You can download a free HTTP server from <http://httpd.apache.org/> or use Microsoft IIS web server. Then setup HTTP server.

For more information on how to configure TFTP, FTP and HTTPS servers, please refer to [Upgrade through TFTP](#) in page 63, [Upgrade through FTP](#) in page 66 and [Upgrade through HTTPS](#) in page 67.

6.2 How to Configuring HTTP Server

Login webpage, "Management" -> "Auto Provision" -> "Firmware Upgrade" -> "Upgrade Mode" needs to be set to HTTP. "Firmware Server Path" needs to be set to be a valid URL of a HTTP server, and server name can be in either FQDN or IP address format. Below are examples of some valid URLs.

e.g. firmware.mycompany.com:5688/Htek

e.g. www.mycompany.com:5688/fm/Htek

e.g. 218.2.83.110

Below are Instructions for FW upgrade via HTTP:

- (1) You can download a free HTTP server from <http://httpd.apache.org/> or use Microsoft IIS web server. Then setup HTTP server.
- (2) Unzip the firmware file and put the files under the root/fm directory of the HTTP server.
- (3) Visiting “http://192.168.0.254/fm/fw924.rom on localhost by browser” to verify the HTTP Server. If visiting “http://192.168.0.254/fm/fw924.rom on another computer is no prompt to download fw924.rom file, please check the firewall (Suggest to close the firewall).
- (4) Change the setting of UC9xx (192.168.0.254 is HTTP server):

Click “SaveSet”.

(5) Restart the UC9xx, IP Phone will restart and automatically get firmware files from HTTP server.

NOTES:

- (1) We recommend you to use Htek HTTP server, or you can also use your own TFTP/HTTP/FTP/HTTPS server for upgrade and provisioning procedures.
- (2) You need to update the settings and restart the IP Phone after “Firmware Server Path” is set. If the configured firmware server is found and a new code image is available, UC9xx IP Phone will attempt to retrieve the new image files by downloading them into the UC9xx’s SDRAM. During this stage, the phones LEDs will blink more frequently until the checking/downloading process is finished. Upon verification of checksum, the new code image will be saved into the Flash. If TFTP/HTTP/FTP/HTTPS fails for any reason (e.g. TFTP/HTTP/FTP/HTTPS server is not responding, there are no code image files available

for upgrade, or checksum test fails, etc.), the phone will stop the TFTP/HTTP/FTP/HTTPS process and simply boot using the existing code image in the flash.

(3) Firmware upgrade takes 3 to 8 minutes over Internet, or just 1 minute on a LAN. We recommend you to upgrade the FW in a controlled LAN environment.

7. Obtain Provisioning Server's Address

Htek IP Phone supports to obtain the provisioning server address in below 3 ways:

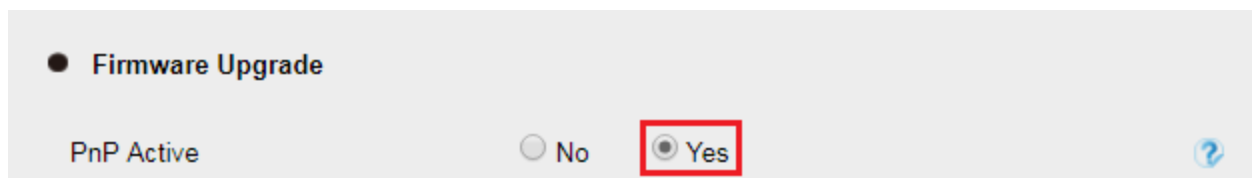

- Plug and Play (PnP) Server
- DHCP Options
- Phone Flash

The priority of obtaining the provisioning server address: PNP Server (SIP PnP MCAST) --> DHCP Option 128 or 150 or 66 --> Configuration in Flash.

1) The PNP Server feature is enable default.

Webpage --> Management --> Auto Provision --> PnP Active: No/Yes

If you set "Yes", the Phone will obtain the provisioning server address from the PnP Server.

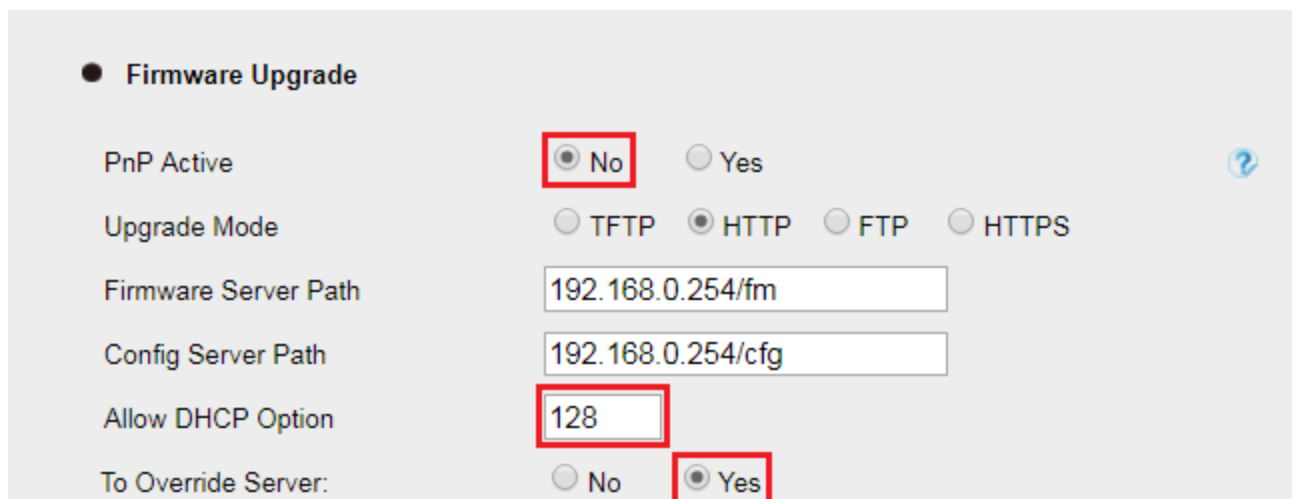

● Firmware Upgrade

PnP Active No Yes ?

2) Setting of "DHCP Option 128 or 150 or 66":

If you set "PnP Active" to "No", login Webpage --> Management --> Auto Provision --> Allow DHCP Option (128 or 150 or 66) To Override Server: No/Yes

If you set "To Override Server" to "Yes", the Phone will obtain the provisioning server address from the DHCP Option (128). For examples:

● Firmware Upgrade

PnP Active No Yes ?

Upgrade Mode TFTP HTTP FTP HTTPS

Firmware Server Path

Config Server Path

Allow DHCP Option

To Override Server: No Yes

DHCP option 128 is <ftp://192.168.1.240/cfg>, the phone will get the configuration file from <192.168.1.240/cfg> through TFTP protocol.

If the default setting is:

Allow DHCP Option

To Override Server: No Yes

DHCP option 66 is <http://192.168.1.240/cfg>, the phone will get the configuration file from 192.168.1.240/cfg through HTTP protocol.

3) Configuration in Flash.

If you set both "PnP Active" and "To Override Server" to "No", or don't set DHCP option 128/66/150 in your DHCP server, the phone will obtain the provisioning server address from the setting "Config Server Path".

For examples, when the setting is:

● Firmware Upgrade

PnP Active No Yes

Upgrade Mode TFTP HTTP FTP HTTPS

Firmware Server Path

Config Server Path

Allow DHCP Option

To Override Server: No Yes

The phone will get the configuration file from 192.168.0.254/cfg through HTTP protocol.

Note: You can set the phone to automatically upgrade every certain time:

For examples:

● Firmware Upgrade

PnP Active No Yes

Upgrade Mode TFTP HTTP FTP HTTPS

Firmware Server Path

Config Server Path

Allow DHCP Option

To Override Server: No Yes

AUTO Upgrade: No Yes

Check for upgrade every Minutes

The phone will check the configuration file and the firmware every 10080 minutes (7 days). If there are the new cfg files or the new firmware, the phone will upgrade automatically.

8. Update mode

Update mode sets the desired time frames for phone to perform the auto provisioning process.

Below is the introduction of the 3 updating modes in detail:

- Power On
- Repeatedly
- SIP NOTIFY Message

Power On

Power On mode is set as default. The phone will perform auto provisioning process when it is power on.

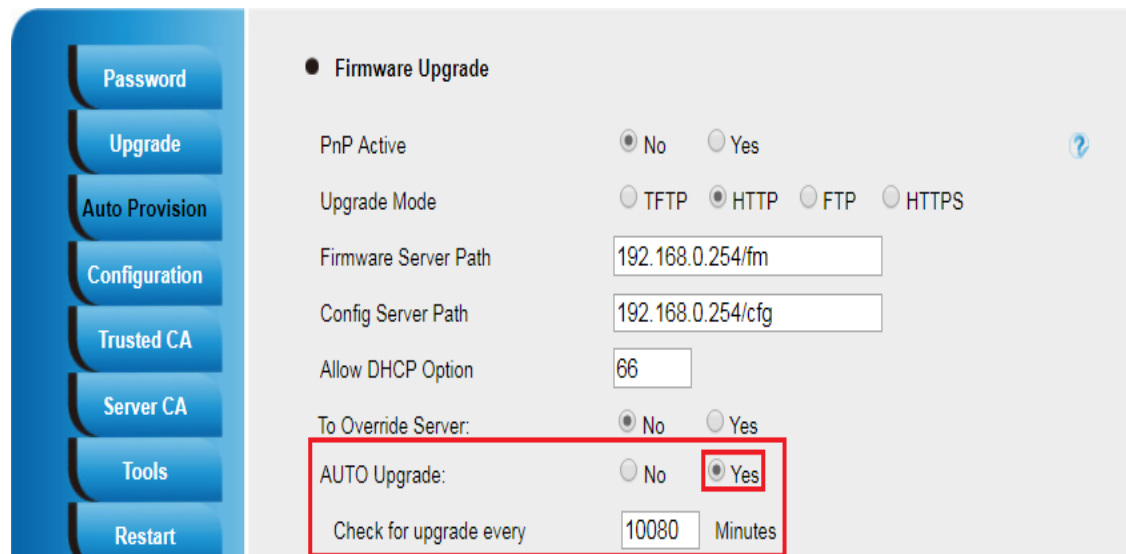

Repeatedly

The phone performs auto provisioning process at a regular interval. You can configure the interval for the Repeatedly mode. The default interval is 10080 minutes.

To activate the Repeatedly mode via web user interface:

1. Click the Management->Auto Provision:

2. AUTO Upgrade set Yes :

The screenshot shows the 'Firmware Upgrade' configuration page. The left sidebar contains navigation buttons: Password, Upgrade, Auto Provision (selected), Configuration, Trusted CA, Server CA, Tools, and Restart. The main content area is titled 'Firmware Upgrade' and contains the following settings:

- PnP Active: No Yes
- Upgrade Mode: TFTP HTTP FTP HTTPS
- Firmware Server Path:
- Config Server Path:
- Allow DHCP Option:
- To Override Server: No Yes
- AUTO Upgrade: No Yes
- Check for upgrade every: Minutes

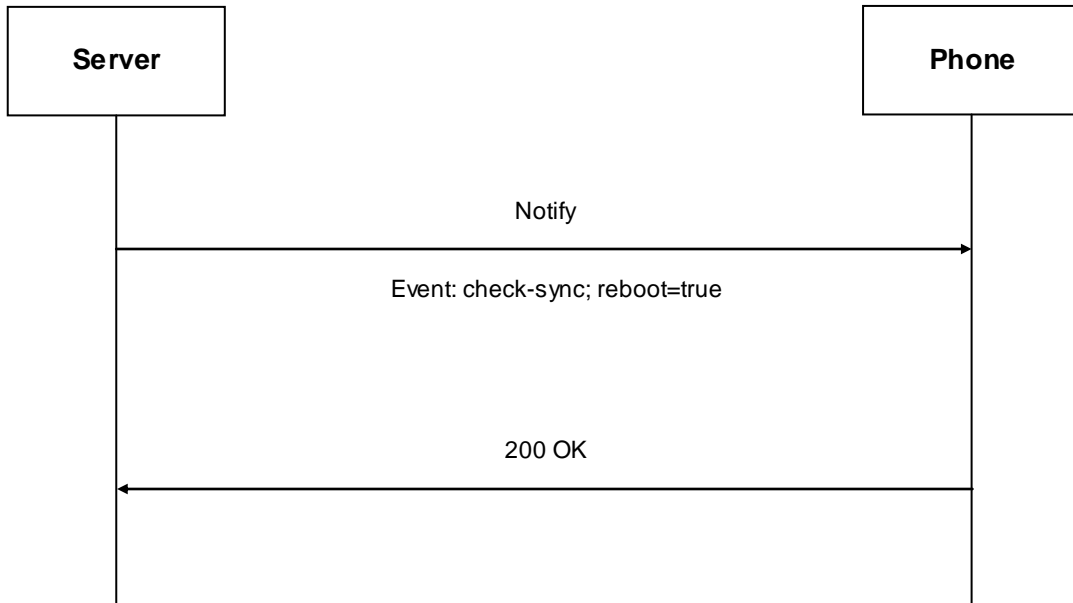

A red rectangular box highlights the 'AUTO Upgrade' section, specifically the 'Yes' radio button and the '10080' value in the 'Check for upgrade every' field.

3. Click the "SaveSet" button to save the change.

SIP NOTIFY Message

The phone will perform auto provisioning process when receiving a SIP NOTIFY message which contains the header "Event: check-sync". If the header of the SIP NOTIFY message contains an additional string "reboot=true", the phone will reboot immediately and then perform the auto provisioning process. For this update mode, it requires the server supports.

Below picture shows the message flow:

9. Download and Verify Configurations

9.1 Download configuration files

Once obtaining a provisioning server address in one of the ways introduced above, the phone will connect to the provisioning server and download configuration files. During the auto provisioning process, the phone will try to download the common configuration file `cfg000x.xml` firstly, and then try to download the `cfgMAC.xml` file from the provisioning server.

9.2 Resolve and Update configurations

The phone will resolve the configuration files after downloading, then update the configurations to the phone flash. Generally, the phone will reboot to make the configurations effective after the auto provisioning process is finished.

9.3 Verify configurations

You can verify the update via phone user interface after auto provisioning, or you can verify it via web user interface

During the auto provisioning process, you can monitor the downloading requests and response messages by a wireshark tool.

Some examples show as follows:

Example1: Htek UC924 IP Phone downloads configuration files from TFTP server.

10. Firmware and Configuration File

Prefix and Postfix

Htek IP Phone supports Prefix and Postfix for both firmware and configuration files. Parameter P232 and P233 are for Prefix and Postfix for Firmware, respectively. Parameter P234 and P235 are for Prefix and Postfix for Configuration file, respectively. Firmware Prefix and Postfix allows device to download the firmware name with the matching Prefix and Postfix.

In addition, when Parameter P238 (Check New Firmware only when F/W pre/suffix changes) is set to 1, the device will only issue the Firmware Upgrade request if there are changes in the firmware Prefix or Postfix.

Below are the firmware BASIC NAMES that are related to UC924P:

If the firmware version is earlier than 1.0.3.73, the firmware BASIC NAMES as follows:

- boot_924.bin
- img_924.bin
- ring4.bin
- ring5.bin
- ring6.bin
- ring7.bin
- ring8.bin
- Language.tar
- hlpres.tar

Service provider can use “hl_” as prefix, and “_1.0.3.70” as postfix, the above files will be changed to:

- hl_boot_924.bin_1.0.3.70
- hl_img_924.bin_1.0.3.70
- hl_ring4.bin_1.0.3.70
- hl_ring5.bin_1.0.3.70
- hl_ring6.bin_1.0.3.70
- hl_ring7.bin_1.0.3.70
- hl_ring8.bin_1.0.3.70
- hl_Language.tar_1.0.3.70
- hl_hlpres.tar_1.0.3.70

If the firmware version is 1.0.3.73 or later than 1.0.3.73, the firmware BASIC NAME as follows:

- fw924.rom

Service provider can use “hl_” as prefix, and “_1.0.3.73” as postfix, the above files will be changed to:

- hl_ fw924.rom _1.0.3.73

In this way, all of the firmware with different version could be stored in one single directory, and they could be differentiated by using prefix or postfix, i.e., all files with a postfix of “_1.0.3.73” belong to the firmware version 1.0.3.73.

Same rule applies to configuration files, i.e., for configuration file named “cfg001fc1001708”, there could be 3 versions: “hl_ cfg001fc1001708_cfg001”, “hl_ cfg001fc1001708_cfg002”, and “hl_ cfg001fc1001708_cfg003”. The BASIC NAME of the configuration file is “cfg001fc1001708”, but there are 3 different versions, the one that will be accepted is the one with matching prefix and postfix specified in the current configuration.

11. Firmware Server and Configuration

File Server

Beside the Prefix and Postfix for firmware and configuration files, different server paths for firmware upgrade or Configuration File Server can be specified in different FQDN, i.e.:

Firmware Upgrade

PnP Active No Yes [?](#)

Upgrade Mode TFTP HTTP FTP HTTPS

Firmware Server Path

Config Server Path

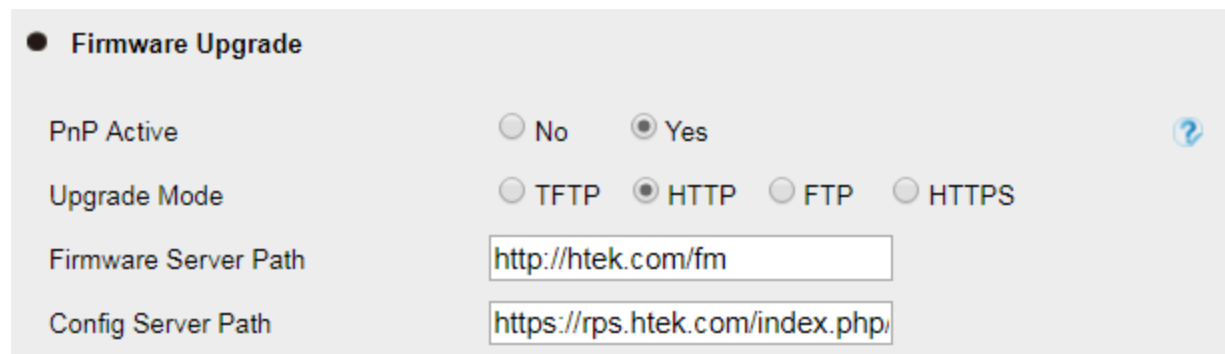

The parameters are P192 and P237 for Firmware and Config Server

12. Manage Firmware and Download Configuration File

When parameter P194 (Auto Upgrade) is set to 1, Service Provider can use P193 (Auto Check Interval) to have the devices periodically check with either Firmware Server or Config Server, whenever they are defined. This allows the device periodically check if there are any new changes need to be taken on a scheduled time. By defining different intervals in P193 for different devices, Service Provider can distribute the Firmware or Configuration File download schedule to reduce the Firmware or Provisioning Server load at any given time.

13. Pre_Configuration and Configuration Redirection

Please note: If your phone default setting is as below:

Currently Htek Phone does not support pre_configuration and configuration Redirection, please refer to section 6 in page 24.

For mass deployment, we provide TFTP/HTTP redirection service. By default, all Htek products point to our provisioning system. When a unit is powered up, it will automatically contact our provisioning server. Our provisioning server will redirect the unit to customer's TFTP/FTP/HTTP/HTTPS server. The unit will reboot and send further provisioning request to ask for configuration file (or firmware file) from customer's TFTP/FTP/HTTP/HTTPS server.

Below is the information that we need from service providers for TFTP/HTTP redirection:

1. MAC address range, this should be printed on the carton box
2. Your TFTP/FTP/HTTP/HTTPS server IP address
3. Your company name and address

Here are the things that service providers should do:

1. Create configuration files for all the devices and put them on your TFTP/HTTP server.
2. Download the latest official release from <http://www.htek.com/download.php> and put them on your TFTP/FTP/HTTP/HTTPS server (same directory as above)
3. After we inform you that the devices have been entered into our central provisioning database, please take out a few devices to test. Upon powering up, they should contact our provisioning server <https://rps.htek.com/index.php/fn/g> first, and then get redirected to your TFTP/FTP/HTTP/HTTPS server and pull out the configuration files and the firmware files. They will be upgraded to the latest firmware with your configurations.

14. Automatic Provisioning Within LAN

Htek products support DHCP Option 66 or 128 or 150 for automatic provisioning within a Local Area Network. The provisioning server URL is embedded inside standard option 66 or 128 or 150 of DHCP responses.

Htek IP Phones send DHCP DISCOVER with the following information:

No.	Time	Source	Destination	Protocol	Length	Info
5223	71.4139560	0.0.0.0	255.255.255.255	DHCP	590	DHCP Discover - Transaction ID 0x9998bd5
5224	71.4139680	192.168.0.254	255.255.255.255	DHCP	389	DHCP Offer - Transaction ID 0x9998bd5
5225	71.4180040	0.0.0.0	255.255.255.255	DHCP	590	DHCP Request - Transaction ID 0x9998bd5
5226	71.4180140	192.168.0.254	255.255.255.255	DHCP	389	DHCP ACK - Transaction ID 0x9998bd5

```

Your (client) IP address: 0.0.0.0 (0.0.0.0)
Next server IP address: 0.0.0.0 (0.0.0.0)
Relay agent IP address: 0.0.0.0 (0.0.0.0)
Client MAC address: HanlongT_1a:96:e4 (00:1f:c1:1a:96:e4)
Client hardware address padding: 00000000000000000000
Server host name not given
Boot file name not given
Magic cookie: DHCP

0040 00 00 00 00 00 00 00 00 1f c1 1a 96 e4 00 00 00 00 .....f....
0050 00 00 00 00 00 00 00 00 00 00 00 00 00 00 00 00 .....
0060 00 00 00 00 00 00 00 00 00 00 00 00 00 00 00 00 .....
0070 00 00 00 00 00 00 00 00 00 00 00 00 00 00 00 00 .....
  
```

DHCP Server can be configured to send the following information in its DHCP OFFER. Please notice that in this example, an HTTP://URL is provided in the Option 66 “TFTP Server Name” field or Option 128 “TFTP server IP address” or Option 150 “TFTP server address”. Device will then issue HTTP requests instead of the traditional TFTP requests to the server. This design makes more flexible in device provisioning.

No.	Time	Source	Destination	Protocol	Length	Info
3299	34.7459840	0.0.0.0	255.255.255.255	DHCP	590	DHCP Discover - Transaction ID 0x5644dd47
3433	37.2514340	192.168.0.254	255.255.255.255	DHCP	389	DHCP Offer - Transaction ID 0x5644dd47
3434	37.2541100	0.0.0.0	255.255.255.255	DHCP	590	DHCP Request - Transaction ID 0x5644dd47
3435	37.2541210	192.168.0.254	255.255.255.255	DHCP	389	DHCP ACK - Transaction ID 0x5644dd47

15. Troubleshooting

This part provides guidance to help you solve problems you might encounter when deploying phones.

If you require additional information or assistance with the deployment, please contact your system administrator.

Why does the phone fail to download configuration files?

- Ensure that auto provisioning feature is configured properly.
- Ensure that the provisioning server and network are reachable.
- Ensure that authentication credentials configured on the phone are correct.
- Ensure that configuration files exist on the provisioning server.

Why does the provisioning server return HTTP 404?

- Ensure that the provisioning server is properly set up.
- Ensure that the access URL is correct.
- Ensure that the requested files exist on the provisioning server.

Why does the phone display "Network Down"?

- Ensure that the Ethernet cable is plugged into the Internet port on the phone and the Ethernet cable is not loose.
- Ensure that the switch or hub in your network is operational.
- Ensure that the configurations of network are properly set in the configuration files.

Why is the permission denied when uploading files to the root directory of the FTP server?

- Ensure that the complete path to the root directory of the FTP server is authorized.
- Check security permissions on the root directory of the FTP server, if necessary, change the permissions.

Why doesn't the phone obtain the IP address from the DHCP server?

- Ensure that settings are correct on the DHCP server.
- Ensure that the phone is configured to obtain the IP address from the DHCP server.

Why doesn't the phone display the Language, only display English on LCD and Web?

- Ensure that the name of the language is correct.
- Ensure that the network is available and the root directory is right for downloading.
- Ensure that the parameters are correctly set in the configuration files.
- Ensure that the language's Coding format is **UTF-8**.

Why doesn't the phone display the wallpaper or ScreenSaver or the weblog of webpage?

- Ensure that the file format of the wallpaper, ScreenSaver and weblogo is *.jpg.
- Ensure that the size of the wallpaper, ScreenSaver and weblogo file is not larger than that the phone supports, or check the hlpres.tar is not larger than 2M.
- Ensure that the name of the wallpaper, ScreenSaver and weblogo are correct.
- Ensure that the network is available and the root directory is right for downloading.
- Ensure that the wallpaper, ScreenSaver and weblogo files in the hlpres.tar file.

Why doesn't the phone update configurations?

- Ensure that the configuration files are different from the last ones.
- Ensure that the phone has downloaded the configuration files.
- Ensure that the parameters are correctly set in the configuration files.

16. Glossary

MAC Address: A Media Access Control address (*MAC* address) is a unique identifier assigned to network interfaces for communications on the physical network segment.

DHCP: Dynamic Host Configuration Protocol (DHCP) is a network configuration protocol for hosts on Internet Protocol (IP) networks. Computers that are connected to IP networks must be configured before they can communicate with other hosts.

FTP: File Transfer Protocol (FTP) is a standard network protocol used to transfer files from one host to another host over a TCP -based network, such as the Internet. It is often used to upload web pages and other documents from a private development machine to a public web-hosting server.

HTTP: The Hypertext Transfer Protocol (HTTP) is an application protocol for distributed, collaborative, hypermedia information systems. HTTP is the foundation of data communication for the World Wide Web.

HTTPS: Hypertext Transfer Protocol Secure (HTTPS) is a combination of Hypertext Transfer Protocol (HTTP) with SSL/TLS protocol. It provides encrypted communication and secure identification of a network web server.

TFTP: Trivial File Transfer Protocol (TFTP) is a simple protocol to transfer files. It has been implemented on top of the User Datagram Protocol (UDP) using port number 69.

AES: Advanced Encryption Standard (AES) is a specification for the encryption of electronic data.

URL: A uniform resource locator or universal resource locator (URL) is a specific character string that constitutes a reference to an Internet resource.

XML: Extensible Markup Language (XML) is a markup language that defines a set of rules for encoding documents in a format that is both human-readable and machine-readable.

17. How to Edit cfg000x.xml

When Htek device boots up or reboots, it will generate a request for a XML configuration file named "cfg000x.xml". It is a common configuration, all Htek device can get this configuration file. Then Htek device will request for a binary format configuration file named "cfgMAC" and another XML configuration file named "cfgMAC.xml", in which "MAC" is the MAC address of the device. Configuration files cfgMAC and cfgMAC.xml can only be obtained from Htek device which has mac address.

You can customize configuration parameters by editing XML configuration file "cfg000x.xml", and different device would use different file name.

Device Type	file name
UC601	-----> cfg0111
UC901	-----> cfg0018
UC902	-----> cfg0017
UC903	-----> cfg0016
UC912/UC912G	-----> cfg0019
UC912GM	-----> cfg0019
UC923	-----> cfg0013
UC924	-----> cfg0012
UC924E	-----> cfg0112
UC926	-----> cfg0010
UC926E	-----> cfg0110

For example, if you have a Htek device UC924 and you want to configure its Line key 1 as BLF to monitor extension 1002, you can realize this by following two methods.

1.Create a new XML file and add configuration parameters.

Step 1: Create a new XML file entitle it as cfg0000.xml. If your Htek device is UC924, you should entitle it as cfg0012.xml

```

1  <?xml version="1.0" encoding="UTF-8" ?>
2  <hl_provision version="1">
3    <config version="1">
4      .
5    </config>
6  </hl_provision>
7
  
```

Step 2: Login webpage, find out Web Setting Path of line key1. Function Keys-Line

Key-Key1

[logout](#)

Htek

[Home](#) | [Account](#) | [Network](#) | [Function Keys](#) | [Setting](#) | [Directory](#) | [Management](#)

Line Key
 Programmable Key
 EXP KEY

Line Label Length
Line Page Indicator

BLF list MODE
line key as cancel

Line	Type	Mode	Value	Label	Account	Extension
Key1	Line	Default			Auto	
Key2	Line	Default			Auto	
Key3	Line	Default			Auto	
Key4	Line	Default			Auto	
Key5	N/A	Default			Account 1	
Key6	N/A	Default			Account 1	
Key7	N/A	Default			Account 1	
Key8	N/A	Default			Account 1	
Key9	N/A	Default			Account 1	
Key10	N/A	Default			Account 1	
Key11	N/A	Default			Account 1	
Key12	N/A	Default			Account 1	
Key13	N/A	Default			Account 1	

NOTE

Step 3: Refer to << parameter list >>, you can get detailed description of this parameter.

Function Keys-> Line Key-> Line key 1->Type	Number: 0-52	Key Type(0 -N/A, 1 - Line, 2 - Speeddial, 3 - BLF, 4 - BLF List, 5 - Voicemail, 6 - Direct Pickup, 7 - Group Pickup, 8 - Call Park, 9 - Intercom, 10 - DTMF, 11 - Prefix, 12 - Local Group, 13 - XML Group, 14 - XML Browser, 15 - LDAP, 16 - Network Directories, 17 - Conference, 18 - Forward, 19 - Transfer, 20 - Hold, 21 - DND, 22 - Redial, 23 - Call Return, 24 - SMS, 25 - Record, 26 - URL Record, 27 - Paging, 28 - Group Listening, 29 - Public Hold, 30 - Private Hold, 32 - Hot Desking, 33 - ACD, 34 - Zero Touch, 35 - URL, 44 - Network Group, 47 - MultiCast Paging, 51 - Group Call Park, 52 - CallPark Retrieve)	P41200
Function Keys-> Line Key-> Line key 1->Mode	Number: 0-3	Mode.0 - Deafult, 1 - Lock, 2 - Float	P20600
Function Keys-> Line Key-> Line key 1-> Value	string	Value	P41300
Function Keys-> Line Key-> Line key 1-> Label	String	Label	P41400
Function Keys-> Line Key-> Line key 1-> Account	Number:0, 1,2,3,255	255 - Auto, 0 - Account 1, 1 - Account 2, 2 - Account 3, 3 - Account 4	P41500
Function Keys-> Line Key-> Line key 1-> Extension	String	Extension	P41600

According to description of parameter, we know parameter P41200 should be 3, parameter P41300 should be 1002 and parameter P41600 should be *20*.

Step 4: Edit cfg0012.xml as follow

```

1  <?xml version="1.0" encoding="UTF-8" ?>
2  <hl_provision version="1">
3    <config version="1">
4      <P41200 para="LineKey1.Type">3</P41200>
5      <P41300 para="LineKey1.Value">1002</P41300>
6      <P41400 para="LineKey1.Label" />
7      <P41500 para="LineKey1.Account">0</P41500>
8      <P41600 para="LineKey1.PickupCode">*20*</P41600>
9    </config>
10 </hl_provision>

```

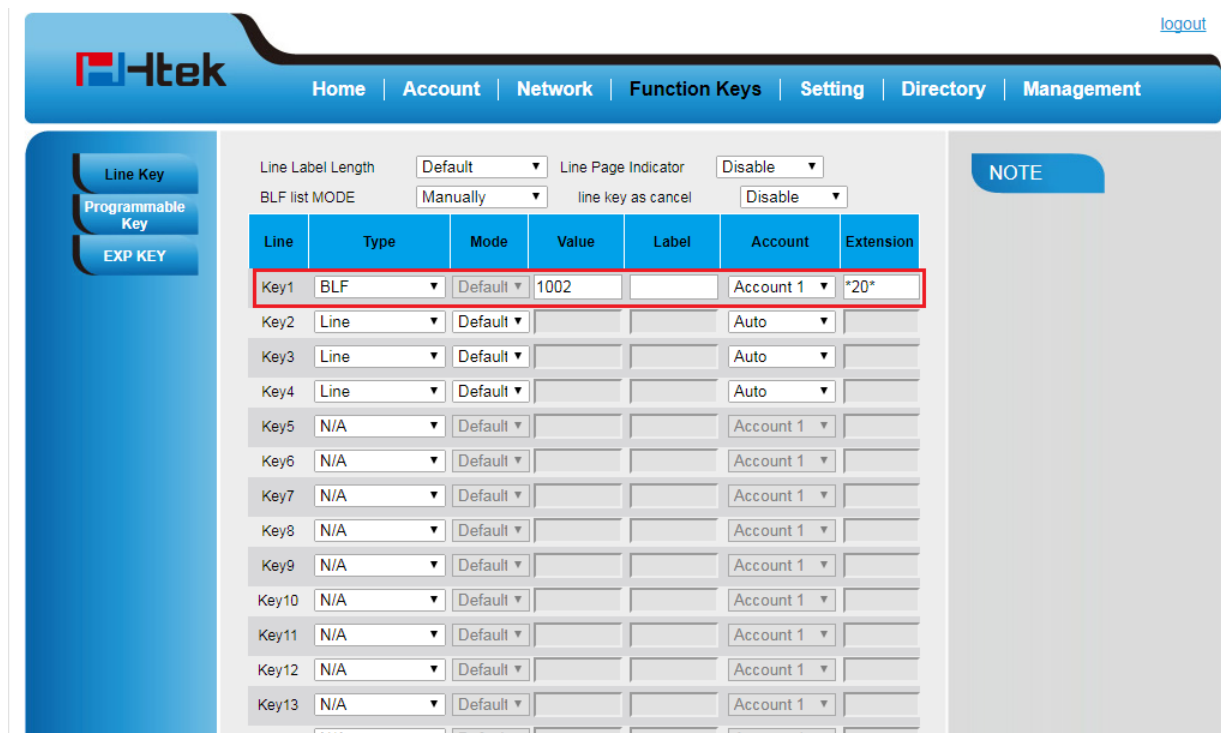

Step 5: Put this XML configuration file in your config server path.

Step 6: Restart phone to apply to the settings.

2.Edit relevant parameter in the template file(template.xml)

Step 1: Login webpage, enter Function Keys -> Memory Key

Step 2 : Configure options you want, for example

Line Label Length: Default | Line Page Indicator: Disable
 BLF list MODE: Manually | line key as cancel: Disable

Line	Type	Mode	Value	Label	Account	Extension
Key1	BLF	Default	1002		Account 1	*20*
Key2	Line	Default			Auto	
Key3	Line	Default			Auto	
Key4	Line	Default			Auto	
Key5	N/A	Default			Account 1	
Key6	N/A	Default			Account 1	
Key7	N/A	Default			Account 1	
Key8	N/A	Default			Account 1	
Key9	N/A	Default			Account 1	
Key10	N/A	Default			Account 1	
Key11	N/A	Default			Account 1	
Key12	N/A	Default			Account 1	
Key13	N/A	Default			Account 1	
Key14	N/A	Default			Account 1	

Step 3: click "save" button to save the configuration.

Step 4: Enter Management -> Configuration

Click "Download Xml File" button to download the configuration Xml file. This file includes all parameters of this phone.

Step 5: Open the Xml file that you downloaded, you can find that the parameter has been changed.

```

<P901 para="HTTPPort">80</P901>
<P8724 para="HTTPSPort">443</P8724>
<P8725 para="Type">1</P8725>
<!--Network/Advance/802.1X-->
<P8626 para="802.1XMode">0</P8626>
<P8627 para="Identity" />
<P8628 para="MD5Password" />
<!--Network/Advance/Others-->
<P76 para="STUN Server" />
<P84 para="KeepActiveInterval">20</P84>
<P8684 para="DhcpVlan">0</P8684>
<!--FunctionKeys-->
<P20478 para="LinePageIndicator">0</P20478>
<P20479 para="LineLabelLength">0</P20479>
<!--FunctionKeys/LineKey1-->
<P41200 para="LineKey1.Type">3</P41200>
<P20600 para="LineKey1.Mode">0</P20600>
<P41300 para="LineKey1.Value">1002</P41300>
<P41400 para="LineKey1.Label" />
<P41500 para="LineKey1.Account">0</P41500>
<P41600 para="LineKey1.PickupCode">*20*</P41600>
<!--FunctionKeys/LineKey2-->
<P41201 para="LineKey2.Type">1</P41201>
<P20601 para="LineKey2.Mode">0</P20601>
<P41301 para="LineKey2.Value" />
<P41401 para="LineKey2.Label" />
<P41501 para="LineKey2.Account">255</P41501>
<P41601 para="LineKey2.PickupCode" />

```

Step 6: Change the xml file's name to cfg0012.xml.

Step 7: Put this XML configuration file in your config server path.

Step 8: Restart phone to apply to the settings.

18. Generate Configuration File with Htek Provision Tool and Upgrade the Configuration File via HTTP/HTTPS/FTP/TFTP

Operating Environment

System	Windows 7 and later versions
Display	Minimum: 1280 X 800 pixels
Network	The computer running the software needs to be in the same network segment of the same area as the phone to be provisioned

Server:

HTTP Server: 192.168.0.106

HTTPS Server: 192.168.0.106

FTP Server: 192.168.0.106

TFTP Server: 192.168.0.106

Tool: HtekPT-1.1.1beta.exe

18.1 Generate the configuration file for Htek IP Phones

HPT can batch generate cfg files in a **Keyword-replace** manner.

In MAC mode, the first column must be "MAC" column, where only MAC addresses allowed in the form like "001fc1aabbcc" (lowercase).

“**Keyword-replace**” means to replace the item content (P value) by the exact keyword . To do this, the item to be replaced need to set its content (P value) to a unique string, such as "\$\$userId_1". If the CSV file contained a column whose head is just "\$\$userId_1", then all cfg files generated will substitute "\$\$userId_1" with the string in the cell of the column (specific row is determined by the MAC column).

Step 1. Prepare a CSV File (Sample path: \samples\MacModeSample.csv. Two rows at least needed.)

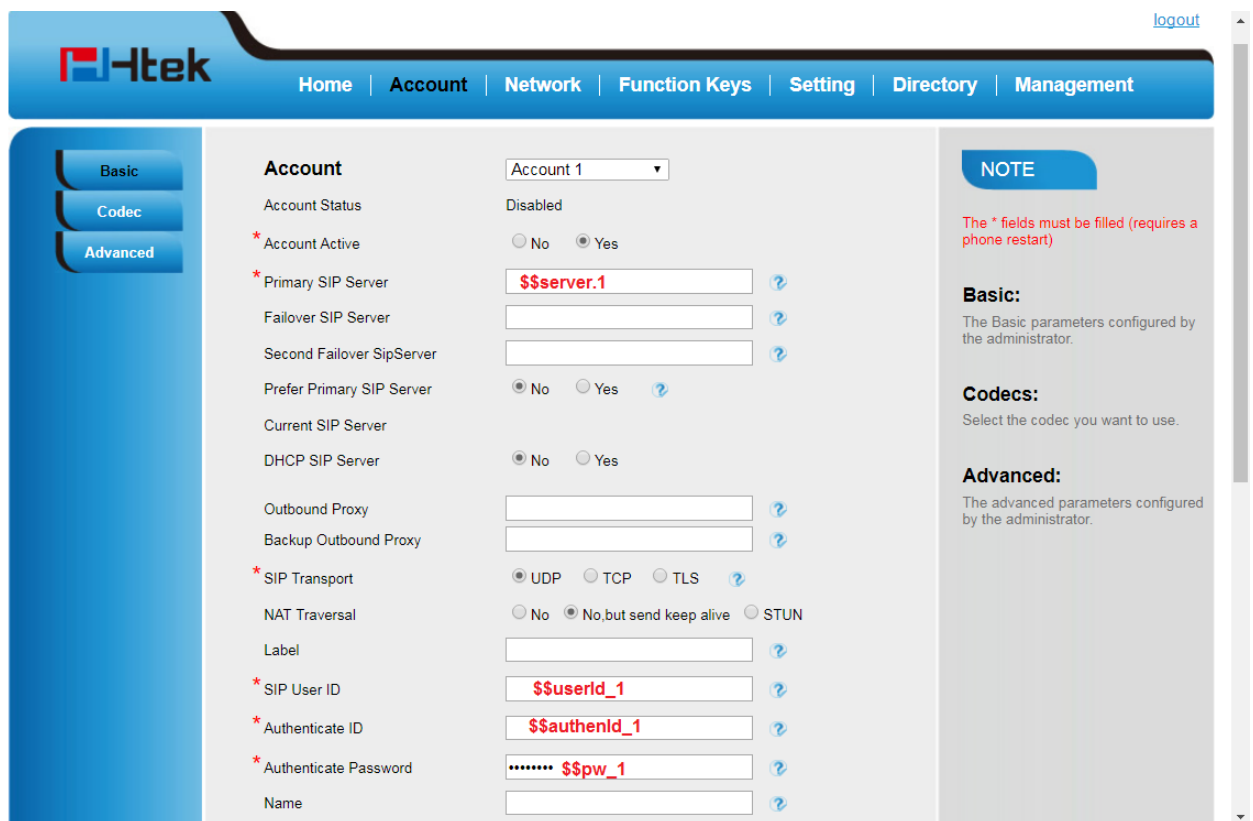

MAC	\$\$server.1	\$\$userId_1	\$\$authenId_1	\$\$pw_1	\$\$server.2	\$\$userId_2	\$\$authenId_2	\$\$pw_2
001fc11c6b77	192.168.0.8:15060	9001	9001	test11	192.168.0.9	522	522	test11
001fc11a92cc	192.168.0.8:15060	9002	9002	test11	192.168.0.9	523	523	test11
001fc11af2c0	192.168.0.8:15060	9003	9003	test11	192.168.0.9	524	524	test11
001fc11b7a2b	192.168.0.8:15060	9004	9004	test11	192.168.0.9	525	525	test11
001fc11c92a2	192.168.0.8:15060	9005	9005	test11	192.168.0.9	527	527	test11
001fc11c5ffa	192.168.0.8:15060	9006	9006	test11	192.168.0.9	529	529	test11
001fc11c6ada	192.168.0.8:15060	9007	9007	test11	192.168.0.9	860	860	test11

Define the **Keyword** you want to write into the CFG file. Such as:

MAC: MAC address of the phone

\$\$server.1: Primary SIP Server of Account 1
 \$\$userId_1: SIP User ID of Account 1
 \$\$authenId_1: Authenticate ID of Account 1
 \$\$pw_1: Authenticate Password of Account 1
 \$\$server.2: Primary SIP Server of Account 2
 \$\$userId_2: SIP User ID of Account 2
 \$\$authenId_2: Authenticate ID of Account 2
 \$\$pw_2: Authenticate Password of Account 2

The corresponding item contents are shown as below.

The screenshot displays the Htek web interface for configuring an account. The top navigation bar includes 'Home', 'Account', 'Network', 'Function Keys', 'Setting', 'Directory', and 'Management'. The left sidebar has tabs for 'Basic', 'Codec', and 'Advanced'. The main content area is titled 'Account' and shows settings for 'Account 1'. The 'Account Status' is 'Disabled'. The 'Account Active' checkbox is checked. The 'Primary SIP Server' is set to '\$\$server.1'. Other fields include 'Failover SIP Server', 'Second Failover SipServer', 'Prefer Primary SIP Server' (set to 'No'), 'Current SIP Server', 'DHCP SIP Server' (set to 'No'), 'Outbound Proxy', 'Backup Outbound Proxy', 'SIP Transport' (set to 'UDP'), 'NAT Traversal' (set to 'No, but send keep alive'), 'Label', 'SIP User ID' (set to '\$\$userId_1'), 'Authenticate ID' (set to '\$\$authenId_1'), 'Authenticate Password' (set to '\$\$pw_1'), and 'Name'. A 'NOTE' section on the right states: 'The * fields must be filled (requires a phone restart)'. Below the note, there are sections for 'Basic:', 'Codecs:', and 'Advanced:' with brief descriptions of each.

Step 2. Edit Cfg File

1. **Select Device:** Click the drop-down box to select the device for visual editing. (If there isn't your device or version in the drop-down box, you can choose a similar device or choose UC926. However, if so, the following edits may present a risk of conflict.)

2. **Load the configuration file template:** By default, the software automatically selects the default cfg file of the current device (Default cfg file of a device is in the device directory, named as "\$devCfg.bin"). You can also click "Load a Template" button to load a bin format cfg file as template. After loading, loaded cfg file will automatically rewrite the information in the Phone Configuration page.

3. Switch to "Phone Configuration" page.

This page is divided to 3 areas. Left area shows the phone image, keys that can be set can be clicked. Middle area is the outline of all the configurable items. Right area shows details where you edit the exact configuration here.

Account_Basic	Account Active	Yes
Account_1	Primary SIP Server	
Account_2	Failover SIP Server	
Account_3	Second Failover SipServer	
Account_4	Prefer Primary SIP Server	No
Account_5	DHCP SIP Server	No

4. In the process of editing, the software will automatically remember changes, so you can switch directly among the outline items. All the changes are kept temporarily. You can click “Save” or “Save as” button to save these changes. Or let them alone.

Cfg file:

Step 3. Load CSV File and Generate Cfg Files

1. Click “Load CSV File” to load CSV file. All the content will be shown on the table.
- NOTE:** For many CSV editor, opened file is exclusively occupied. You need to close this file first, then load it with HPT.
2. Modify csv file if need. You can add rows, edit content or save this table as another file.
 3. Choose to encrypt the generate files or not.
 4. If built-in HTTP server has started, you can check “Autofill Server Path” to autofill the cfg server path and firmware server path. If you want to learn about how to start built-in HTTP server, please refer to [18.2.1 Step 1](#).
 5. Click “Batch” to generate cfg files and save them in the desired directory, or click “Batch to Built-in Server” to generate and store them in the built-in HTTP server file directory (\server\htdocs\cfg and \server\htdocs\fw).

18.2 Upgrade cfgMAC file via HTTP/TPFP/FTP/HTTPS

18.2.1 Upgrade cfgMAC file via Htek Provision Tool

Step 1. Open servers

In general, to fully use all of the capabilities of Htek Provision Tool, you need to configure and start relevant servers first (Skip this step only when you just want to edit cfg files).

1. Switch pages to "Servers".
2. Select the right network interface, which can be accessed by other devices on the same network segment.

HTTP Server: Stop **PNP Server: Stop** **Cfg file:** Load a Template Save Save as uc926_2.0.4.2.22_en

Phone Configuration | Cfg Batch | Devices Online | Servers/Settings

Network
192.168.0.106

Settings
Language: English Change

HTTP Server
 Built-in Server
Port (1025-65525) 1114 Start
 External Server
Cfg Server Path:

PNP Server
 Mac Mode
 PIN Mode
Listen to: 224.0.1.75
Port (1025-65525) 5060 Start

NOTE: For HTTP servers, you can choose build-in or external one. PNP server cannot be turned on until you have selected the external HTTP server or started built-in HTTP server.

3. To start build-in HTTP server, you need to fill in the port edit area with appropriate port, and then click "Start" to run. If the port is not available, it needs to be modified.

HTTP Server: Running **PNP Server: Stop** **Cfg file:** Load a Template Save Save as uc926_2.0.4.2.22_en

Phone Configuration | Cfg Batch | Devices Online | Servers/Settings

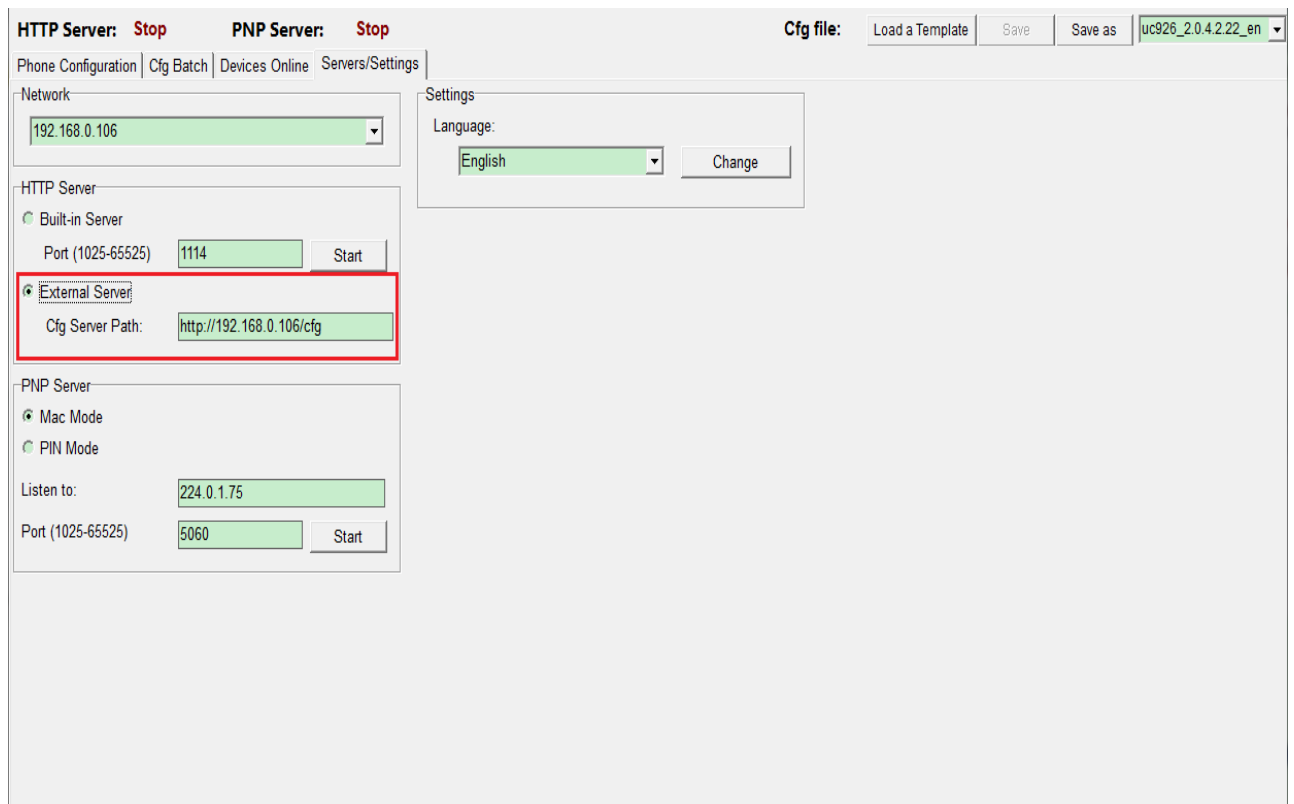

Network
192.168.0.106

Settings
Language: English Change

HTTP Server
 Built-in Server
Port (1025-65525) 1114 Stop
 External Server
Cfg Server Path:

PNP Server
 Mac Mode
 PIN Mode
Listen to: 224.0.1.75
Port (1025-65525) 5060 Start

4. While choosing external Server, you need to fill in a configuration file server address (Cfg Server Path), such as "http://192.168.0.106/cfg" (without "/" at the end). Make sure that this path is accessible.

The screenshot shows the Htek configuration interface. At the top, there are status indicators for 'HTTP Server: Stop' and 'PNP Server: Stop'. Below this, there are navigation tabs: 'Phone Configuration', 'Cfg Batch', 'Devices Online', and 'Servers/Settings'. The 'Servers/Settings' tab is active. On the right, there are buttons for 'Load a Template', 'Save', 'Save as', and a dropdown menu showing 'uc926_2.0.4.2.22_en'. The main configuration area is divided into several sections: 'Network' with a dropdown menu showing '192.168.0.106'; 'Settings' with a 'Language' dropdown set to 'English' and a 'Change' button; 'HTTP Server' with two radio buttons: 'Built-in Server' (unselected) and 'External Server' (selected). Below 'External Server' is a text box for 'Cfg Server Path' containing 'http://192.168.0.106/cfg'. Below 'HTTP Server' is the 'PNP Server' section with two radio buttons: 'Mac Mode' (selected) and 'PIN Mode' (unselected). Below 'Mac Mode' are two text boxes: 'Listen to:' containing '224.0.1.75' and 'Port (1025-65525)' containing '5060'. There are 'Start' buttons for both the HTTP and PNP server sections.

5. Start PNP server. For the Htek phones, fill "Listen to" box with "224.0.1.75" and fill "Port" box with "5060". **Do Not Change These Two Parameters If You Do Not Know What These Mean.** If you cannot start PNP server, please handle the problem according to the error message.

HTTP Server: Running **PNP Server: Running** **Cfg file:** Load a Template Save Save as uc926_2.0.4.2.22_en

Phone Configuration | Cfg Batch | Devices Online | Servers/Settings

Network: 192.168.0.106

Settings: Language: English

HTTP Server
 Built-in Server

 External Server
 Cfg Server Path:

PNP Server
 Mac Mode
 PIN Mode
 Listen to: 224.0.1.75
 Port (1025-65525): 5060

Step2. provision devices

1. If you want to provision the phone via PNP, just restart the phone now and it will be successfully provisioned.
2. If you want to provision directly, you can operate as follows:

HTTP Server: Running **PNP Server: Running** **Cfg file:** Load a Template Save Save as uc926_2.0.4.2.22_en

Phone Configuration | Cfg Batch | Devices Online | Servers/Settings

Online(+)	Vendor(+)	Model(+)	IP Address	MAC	Version(+)
1	OFF				

Network: 192.168.0.106

Mac Filter: Predefined: Htek(00-1fc1-) Input

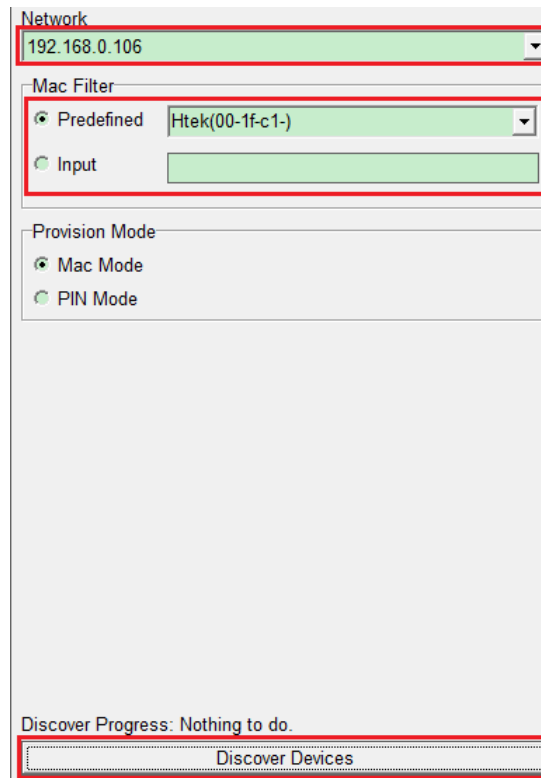

Provision Mode: Mac Mode PIN Mode

Discover Progress: Nothing to do.

Switch pages to "Devices Online".

On this page, you can search for devices on the same network segment within the LAN and provision them.

- (1) Select the right network interface, which can be accessed by other devices on the same network segment.
- (2) Select a Mac address filter or input one (Input filter format: 00-1f, 00-1f -, 00-1f - c, 00-1f - c1-11-22 - , etc.).
- (3) Click "Discover Devices" to start search. When the desired content has been found, click this button to end search, or wait for it to end on its own.

The screenshot shows a web interface for device discovery. It features a 'Network' dropdown menu with '192.168.0.106' selected. Below it is a 'Mac Filter' section with two options: 'Predefined' (selected) and 'Input'. The 'Predefined' option has a dropdown menu showing 'Htek(00-1f-c1-)'. The 'Input' option has an empty text field. Underneath is a 'Provision Mode' section with two radio buttons: 'Mac Mode' (selected) and 'PIN Mode'. At the bottom, there is a 'Discover Progress' indicator showing 'Nothing to do.' and a 'Discover Devices' button.

101	ON	Htek	UC912G	192.168.1.194	00-1f-c1-1c-92-d4	2.0.4.4.25
102	ON	Htek	UC926E	192.168.1.196	00-1f-c1-1a-92-a8	2.0.4.4.25

The results of the search are presented as shown in the table above. The head can be used for the screening of device model and version number.

Click the most left num column, you can select a device, or you can select multiple devices by hold pressing left mouse key and dragging. Click the top left corner of the form to select all the devices of the current table. Left-click on the selected device, which will cancel the selection.

Right click, quick menu will pop up. There are three commands:

- "Provision": This command ask phones to fetch cfg file from the HTTP server where you defined on Page "Servers".
- "Upgrade": Same as "Provision" on current HPT version.
- "Refresh" : Check if the phones selected are still online.

All the selected phones will execute the command.

18.2.2 Upgrade cfgMAC file via configuring Htek IP

Phone

Step 1: Login Htek IP device's webpage, Management → Auto Provision :

Via HTTP mode:

The screenshot shows the Htek web interface with the 'Firmware Upgrade' section selected. The 'Upgrade Mode' is set to 'HTTP'. The 'Firmware Server Path' and 'Config Server Path' are both set to '192.168.0.106/fm' and '192.168.0.106/cfg' respectively. The 'PnP Active' option is set to 'No'. The 'To Override Server' option is set to 'No'. The 'AUTO Upgrade' option is set to 'Yes'. The 'Check for upgrade every' is set to '10080' minutes. The 'Upgrade EXP Firmware' option is set to 'No'. The 'HTTP/FTP/HTTPS UserName' and 'HTTP/FTP/HTTPS Password' fields are empty. A 'NOTE' section on the right contains the following text: 'Firmware Upgrade : Configure detailed settings for firmware updating' and 'Phonebook Download: Configure detailed settings for the .xml format phonebook that is downloaded from the auto-provisioning server'. The navigation bar includes 'Home', 'Account', 'Network', 'Function Keys', 'Setting', 'Directory', and 'Management'. The left sidebar includes 'Password', 'Upgrade', 'Auto Provision', 'Configuration', 'Trusted CA', 'Server CA', 'Tools', 'Restart', and 'Reboot'.

Via TFTP mode:

The screenshot shows the Htek web interface with the 'Firmware Upgrade' section selected. The 'Upgrade Mode' is set to 'TFTP'. The 'Firmware Server Path' and 'Config Server Path' are both set to '192.168.0.106/fm' and '192.168.0.106/cfg' respectively. The 'PnP Active' option is set to 'No'. The 'To Override Server' option is set to 'No'. The 'AUTO Upgrade' option is set to 'Yes'. The 'Check for upgrade every' is set to '10080' minutes. The 'Upgrade EXP Firmware' option is set to 'No'. The 'HTTP/FTP/HTTPS UserName' and 'HTTP/FTP/HTTPS Password' fields are empty. A 'NOTE' section on the right contains the following text: 'Firmware Upgrade : Configure detailed settings for firmware updating' and 'Phonebook Download: Configure detailed settings for the .xml format phonebook that is downloaded from the auto-provisioning server'. The navigation bar includes 'Home', 'Account', 'Network', 'Function Keys', 'Setting', 'Directory', and 'Management'. The left sidebar includes 'Password', 'Upgrade', 'Auto Provision', 'Configuration', 'Trusted CA', 'Server CA', 'Tools', 'Restart', and 'Reboot'.

Via FTP mode:

The screenshot shows the Htek web interface with the 'Firmware Upgrade' section selected. The 'Upgrade Mode' is set to 'FTP'. The 'Firmware Server Path' is '192.168.0.106/fm' and the 'Config Server Path' is '192.168.0.106/cfg'. Other settings include 'PnP Active' (No), 'Allow DHCP Option' (66), 'To Override Server' (No), 'AUTO Upgrade' (Yes), 'Check for upgrade every' (10080 Minutes), and 'Upgrade EXP Firmware' (No). The 'HTTP/FTP/HTTPS Username' and 'Password' fields are empty. A 'NOTE' box on the right contains information about 'Firmware Upgrade' and 'Phonebook Download'.

Via HTTPS mode:

The screenshot shows the Htek web interface with the 'Firmware Upgrade' section selected. The 'Upgrade Mode' is set to 'HTTPS'. The 'Firmware Server Path' is '192.168.0.106/fm' and the 'Config Server Path' is '192.168.0.106/cfg'. Other settings include 'PnP Active' (No), 'Allow DHCP Option' (66), 'To Override Server' (No), 'AUTO Upgrade' (Yes), 'Check for upgrade every' (10080 Minutes), and 'Upgrade EXP Firmware' (No). The 'HTTP/FTP/HTTPS Username' and 'Password' fields are empty. A 'NOTE' box on the right contains information about 'Firmware Upgrade' and 'Phonebook Download'.

You can select the upgrade Mode what you want.

Step 7: Restart the Htek IP device.

e.g: You can see the request logs on the server:

```
[02-10 02:07:54 1c:6a:da] CfgUpgradeOpen(Protocol HTTP, Port 1114,

19. Making Ringtone Notes

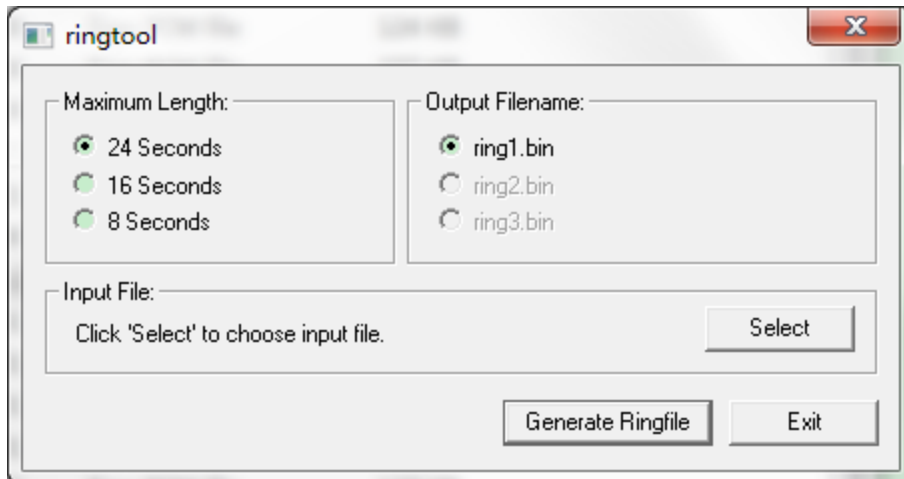

Prepare:

Tool: ringtool.exe

Ring file format: pcm

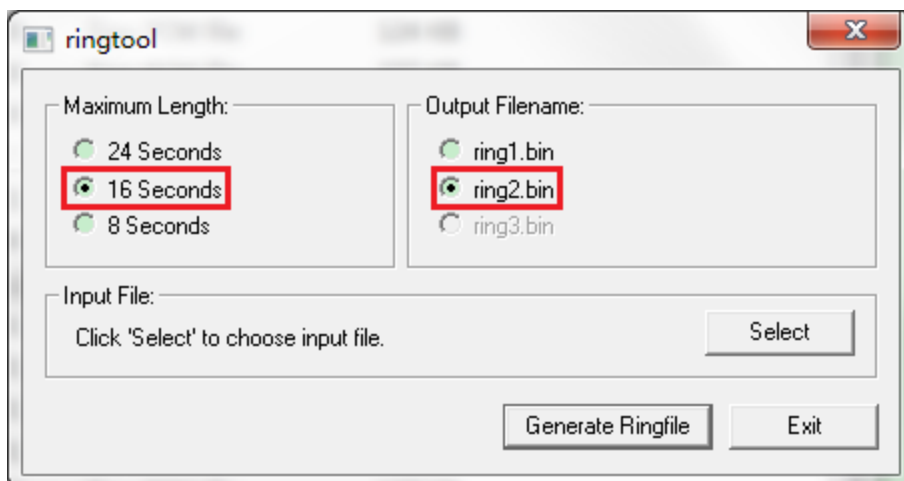

1. To make ring tone for UC9xx

1.1 Double click ringtool.exe

1.2 Select the Maximum Length and Output Filename:

For example, 16 seconds, ring 2.bin

1.3 Click Select to Input the desired ring tone file, and then click Generate Ringfile. Then, you will get Ringfile Created.

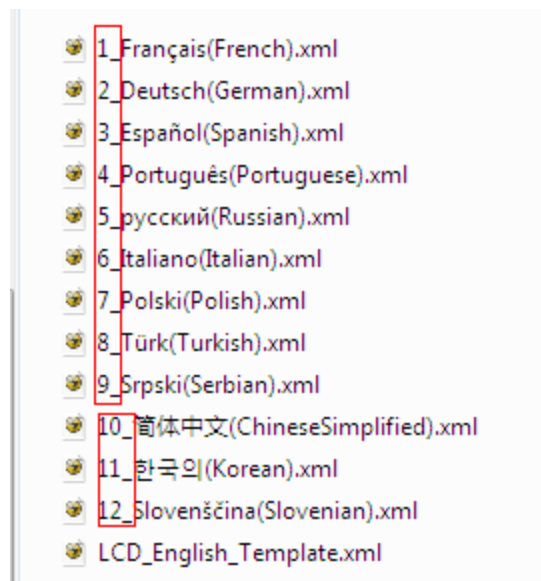

1.4 Now, you get the ring2.bin, also you can rename it as ring5.bin, or other the one you want to replace.

1.5 Upload the ring file by TFTP or HTTP, the ringtone is replaced successfully.

20. LCD and Web Language Custom Guide

20.1 LCD Language custom guide

1. You need to contact us about how to obtain the Language.tar file.
2. Unzip the Language.tar using 7-zip tool.
3. Open the Language folder:

Note:

The file name must be " digital_" at the beginning,the format of the file name is the order of the on the LCD.

4. For example, custom Chinese Language

If your country's language is not existing in the language folder, you can new a xml file with correct naming format. [e.g. 13_xxx(XXX).xml]

If your country's language in the folder, you can custom directly your language.

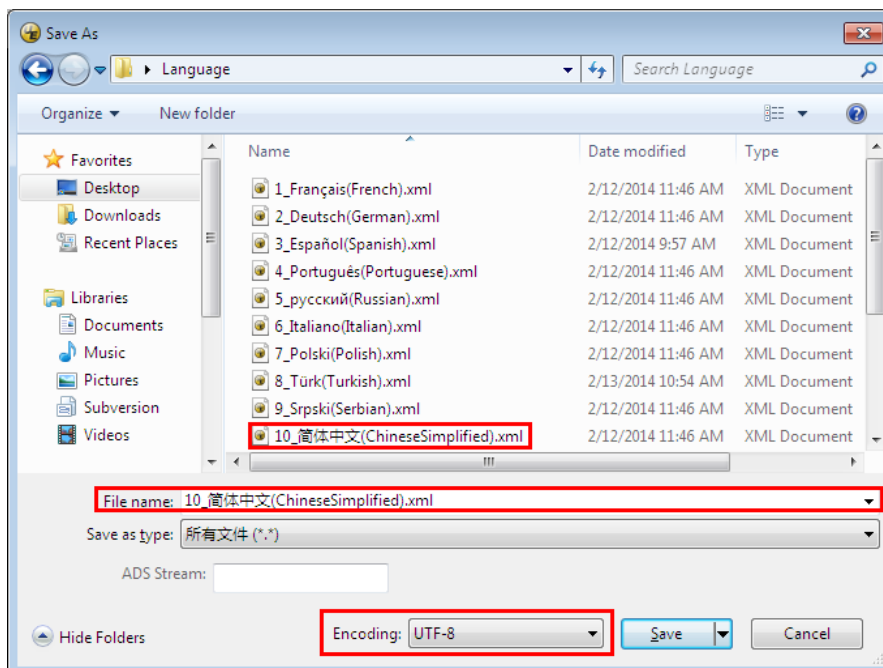

Open the LCD_English_Template.xml with UltraEdit→ Translate English into Chinese

(**Can't leave out any items, otherwise the upgrade failed**) →save as 10_简体中文

(ChineseSimplified).xml in Language folder (Coding format is **UTF-8**)

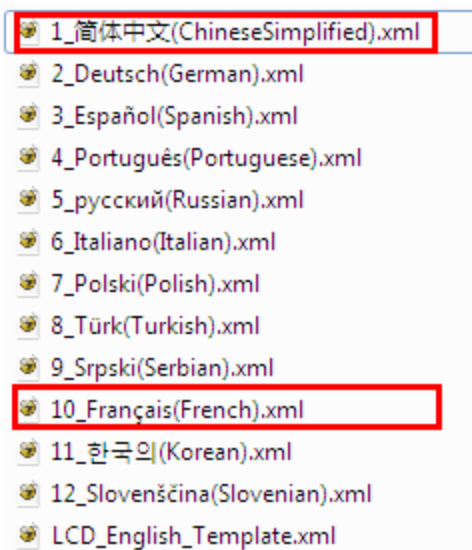

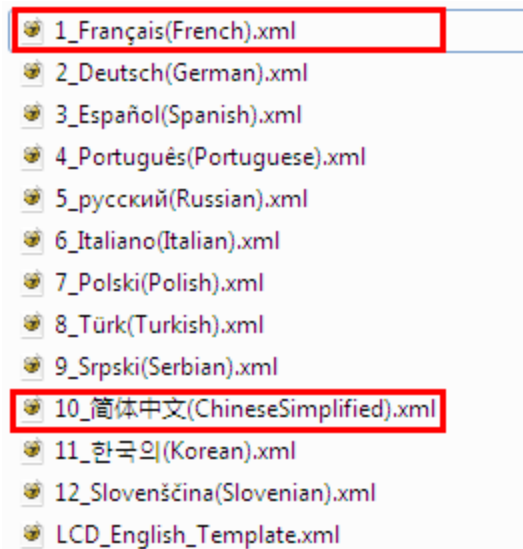

→ Select the Language folder → Compress Language.tar package using 7-zip tool and Cover the original → Delete the Language folder

Note:

If you use UltraEdit, it can generate.xml.bak file after saved. So you need to delete.xml.bak file.

If you want to put your language on the front of other languages, you can also rename the file, for example:

20.2 Web Language custom guide

1. You need to contact us about how to obtain the Language.tar file
2. Unzip the Language.tar using 7-zip tool.
3. Open the Language folder:

1_Français(French).xml	1_French.js
2_Deutsch(German).xml	2_German.js
3_Español(Spanish).xml	3_Spanish.js
4_Português(Portuguese).xml	4_Portuguese.js
5_Russian.js	5_русский(Russian).xml
6_Italian.js	6_Italiano(Italian).xml
7_Polish.js	7_Polski(Polish).xml
8_Türk(Turkish).xml	8_Turkish.js
9_Serbian.js	9_Srpski(Serbian).xml
10_ChineseSimplified.js	10_简体中文(ChineseSimplified).xml
11_Korean.js	11_한국의(Korean).xml
12_Slovenian.js	12_Slovenščina(Slovenian).xml
LCD_English_Template.xml	Web_English_Template.js

Note:

The file name must be " digital_letter" at the beginning. The format of the file name is the order of that on the Web.

4. For example, custom Chinese Language

If your country's language is not existing in the language folder, you can new a xml file with correct naming format. [e.g. 13_XXX.js]

If your country's language in the folder, you can custom directly your language reference Web_English_Template.js.

Open the Web_English_Template.js with UltraEdit → Translate English into Chinese (**Can't leave out any items, otherwise the upgrade failed**) → save as 10_ChineseSimplified.js in Language folder (Coding format is **UTF-8**)

```
jscs = {

  "network": "网络",
  "dsskey": "功能",
  "phone" : "设置",
  "contacts": "通讯录",
  "security": "管理",
```

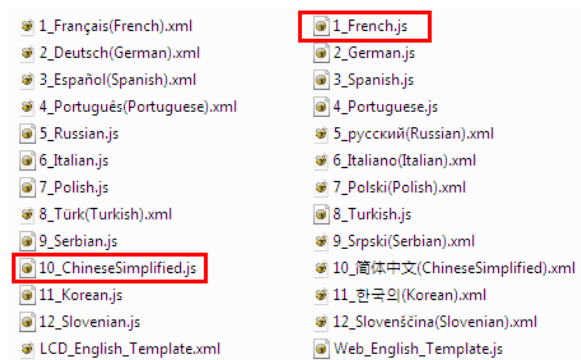

→ Select the Language folder → Compress Language.tar package using 7-zip tool and Cover the original → Delete the Language folder

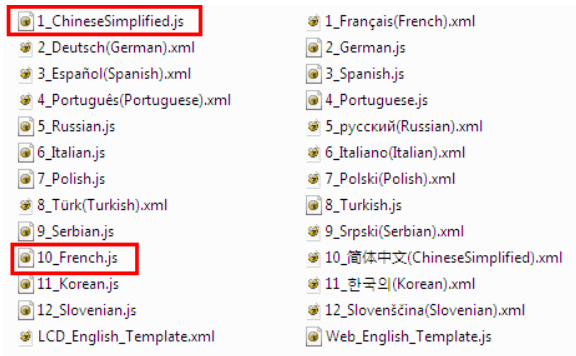

Note:

If you use UltraEdit, it can generate.xml.bak file after saved. So you need to delete.xml.bak file.

If you want to put your language on the front of other languages, you can also rename the file, for example:

When you finish the Language.tar, you must send the Language.tar package to us, then we provide the firmware to you.

21. LCD and Web GUI custom Guide

Unzip the hlpres.tar package (Need to contact us to obtain the hlpres.tar package)

You can replace some file in the hlpres to finish the customization of 1.1 to 1.7

21.1 How to custom the wallpaper1-wallpaper6?

Open hlpres folder→you can custom the wallpaper4.jpg-wallpaper6.jpg
(dimension:480*320 size: through Photoshop tools make the size smaller →Select the hlpres folder→Compress hlpres.tar package

21.2 How to custom the screensaver1- screensaver3?

Open hlpres folder→you can custom the screensaver1.jpg-screensaver3.jpg
(dimension:480*320 size:through Photoshop tools make the size smaller) →Select the hlpres folder→Compress hlpres.tar package

21.3 How to custom the weblogo?

Open hlpres folder→you can custom the weblogo.jpg (dimension:225*93 size: through Photoshop tools make the size smaller) →Select the hlpres folder→Compress hlpres.tar package

21.4 How to custom the eights menus(.png)in the main menu?

Open hlpres folder→you can custom the .png(dimension:65*65 size: through Photoshop tools make the size smaller) →Select the hlpres folder→Compress hlpres.tar package

21.5 How to custom the ...Icon.png?

Open hlpres folder→you can custom the ...Icon.png (dimension:65*65 size: through Photoshop tools make the size smaller) →Select the hlpres folder→Compress hlpres.tarpacage

21.6 How to custom the lcdlogo_color.png?

This logo is only applicable to UC923, UC924, UC924E, UC926, UC926E.

Open hlpres folder → you can custom the lcdlogo_color.png (dimension: 400*42 size: through Photoshop tools make the size smaller) → Select the hlpres folder → Compress hlpres.tar package.

Enter Menu → Display → Screensaver Time-out: 1min; Screensaver Type: Time & Logo → Save, this logo displays correctly.

21.7 How to custom the lcdlogo_bw.png?

This logo is only applicable to UC601, UC901, UC902, UC903, UC912/G/GM.

Open hlpres folder → you can custom the lcdlogo_bw.png (dimension: 100*11 size: through Photoshop tools make the size smaller) → Select the hlpres folder → Compress hlpres.tar package.

Enter Menu → Display → Screensaver Time-out: 1min; Screensaver Type: Time & Logo → Save, this logo display correctly.

The lcdlogo_bw.png's property must be the following standard:

Note:

The photo's name and format must be the same as before;

The size of hlpres file is not more than 2M.

When you finish the hlpres.tar, you must send the hlpres.tar package to us, then we provide the firmware to you.

22. Firmware Upgrade

Please note: When the phone whose firmware version is 1.0.3.62 or earlier upgrades to 1.0.3.73, you must put the upgrade files(include fw8xx.rom/ fw9xx.rom and img_8xx.bin/ img_9xx.bin) into the server path and the phone will upgrade img_8xx.bin/ img_9xx.bin then automatically upgrade fw8xx.rom/ fw9xx.rom.

After upgrading to the new firmware, in the next time, you will only need to put one file fw8xx.rom/ fw9xx.rom into the server path. Upgrade steps of later than 1.0.3.73 version and earlier than 1.0.3.73 version is the same.

22.1 Upgrade through HTTP

To upgrade via HTTP, the “Management”->“Auto Provision” ->“Firmware Upgrade” -> “Upgrade Mode” field needs to be set to HTTP, respectively. “Firmware Server Path” needs to be set to a valid URL of a HTTP server, server name can be in either FQDN or IP address format. Here are examples of some valid URL.

e.g. firmware.mycompany.com:5688/Hanlong

e.g. www.mycompany.com:5688/fm/Hanlong

e.g. 218.2.83.110

Instructions for firmware upgrade via HTTP:

- (1) End users can choose to download the free HTTP server from <http://httpd.apache.org/> or use Microsoft IIS web server. Then set up HTTP server.
- (2) Unzip the firmware file and put all of them under the root/phone directory of the HTTP server.
- (3) Visit “<http://192.168.0.106/phone/fw924.rom>” on localhost by browser to verify the HTTP Server. If visiting “<http://192.168.0.106/phone/fw924.rom>” on other computer is no prompt to download fw924.rom file, please check the firewall (Suggest close the firewall).
- (4) Change the setting of the IP Phone (192.168.0.106 is HTTP server):

Click “SaveSet”.

(5) Restart the IP Phone, and it will restart and auto-get firmware files from HTTP server.

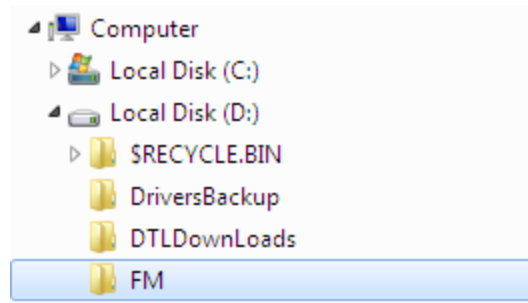

NOTES:

- Htek recommends end-user use the Htek HTTP server. For large companies, we recommend to maintain their own TFTP/HTTP/FTP/HTTPS server for upgrade and provisioning procedures.
- Once a “Firmware Server Path” is set, user needs to update the settings and restart the IP Phone. If the configured firmware server is found and a new code image is available, the IP Phone will attempt to retrieve the new image files by downloading them into the IP Phone’s SDRAM. During this stage, the IP Phone’s LEDs will blink fastly until the checking/downloading process is completed. Upon verification of checksum, the new code image will then be saved into the Flash. If TFTP/HTTP/FTP/HTTPS fails for any reason (e.g. TFTP/HTTP/FTP/HTTPS server is not responding, there are no code image files available for upgrade, or checksum test fails, etc), the IP Phone will stop the TFTP/HTTP/FTP/HTTPS process and simply boot using the existing code image in the flash.
- Firmware upgrade may take as long as 3 to 8 minutes over Internet, or just 1 minutes if it is performed on a LAN. It is recommended to conduct firmware upgrade in a controlled LAN environment if possible.
- Hanlong’s latest firmware is available at <http://www.htek.com/> →Support →Document & Firmware.
- Oversea users are strongly recommended to download the binary files and upgrade firmware locally in a controlled LAN environment.

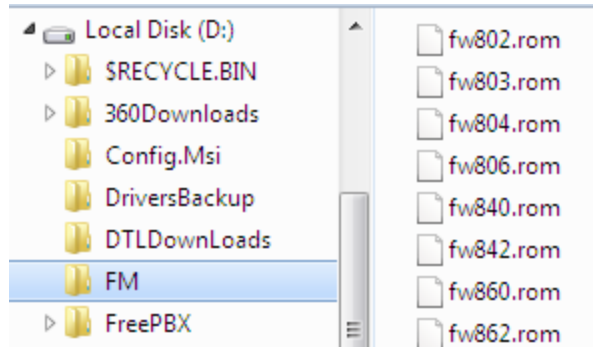

22.2 Upgrade through TFTP

(1) We recommend that you can install a TFTP Server(e.g. SolarWinds -TFTP -Server.exe).

(2) Make a new directory, such as D:\FM.

(3) Unzip the firmware file and put all of them under the directory D:\FM.

(4) The PC running the TFTP server and the IP Phone should be in the same LAN segment.

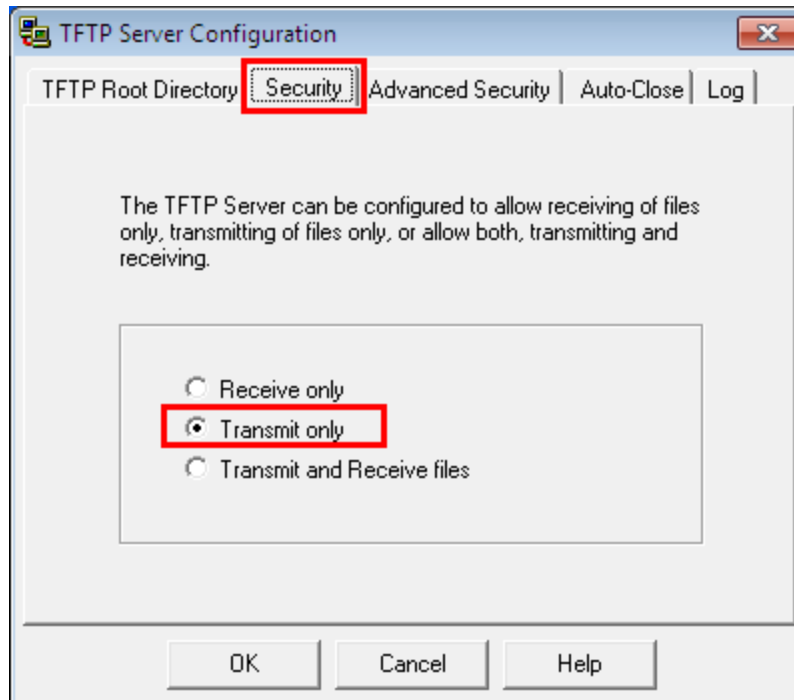

(5) Set TFTP Root Directory to D:\FM.

TFTP SERVER → File → Configure

(6) Go to **File -> Configure -> Security** to change the TFTP server's default setting from "Receive Only" to "**Transmit Only**" for the firmware upgrade.

(7) Start the TFTP server, Configure the Firmware Server Path with the IP address (192.168.0.240 is TFTP server) in the IP Phone's web configuration page.

The screenshot shows the 'Firmware Upgrade' configuration page in the Htek web interface. The 'Firmware Server Path' field is highlighted with a red box and contains the IP address 192.168.0.240. Other settings include PnP Active (No), Upgrade Mode (TFTP), and various upgrade options.

(8) Save the change and restart the IP Phone.

(9) You can test your TFTP server by other PC which is in the same LAN segment.

For examples, in PC which IP address is 192.168.0.126, type command:

TFTP -i 192.168.0.240 get fw924.rom f:/fw924.rom

```

C:\Users\vincent>tftp /?

Transfers files to and from a remote computer running the TFTP service.

TFTP [-i] host [GET | PUT] source [destination]

-i          Specifies binary image transfer mode (also called
           octet). In binary image mode the file is moved
           literally, byte by byte. Use this mode when
           transferring binary files.
host       Specifies the local or remote host.
GET        Transfers the file destination on the remote host to
           the file source on the local host.
PUT        Transfers the file source on the local host to
           the file destination on the remote host.
source     Specifies the file to transfer.
destination Specifies where to transfer the file.

C:\Users\vincent>tftp -i 192.168.0.54 get fw860.rom f:/fw860.rom
Transfer successful: 11592793 bytes in 24 second(s), 483033 bytes/s

C:\Users\vincent>
    
```

If your TFTP server is OK, something like “Transfer successful: ” will be printed in command windows.

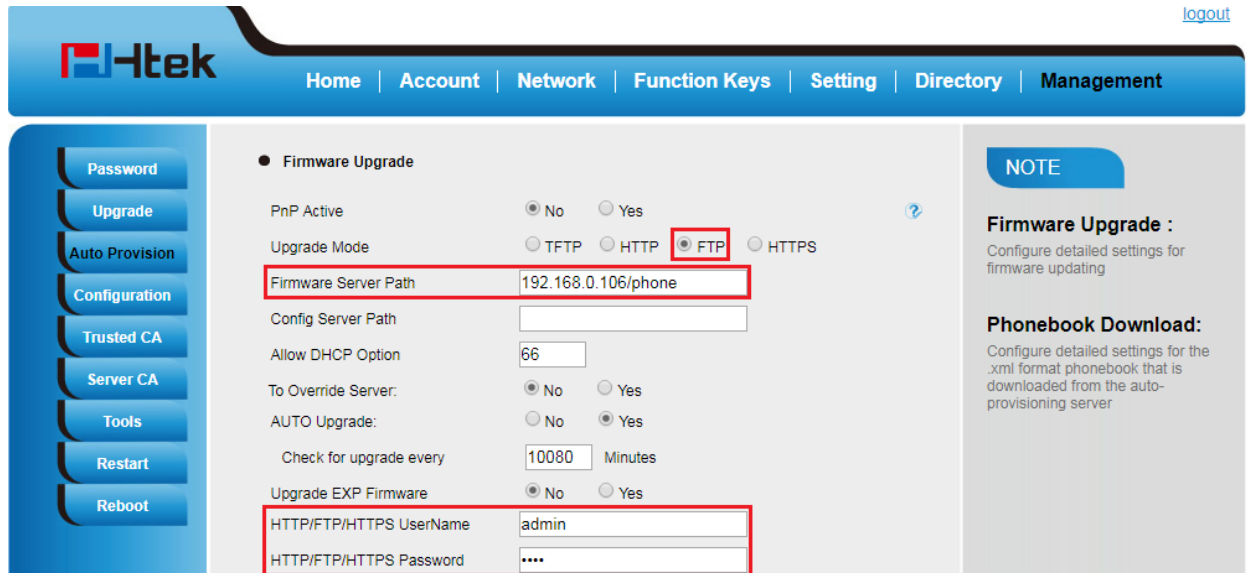

22.3 Upgrade through FTP

(1) Setup a FTP Server(e.g. FileZilla Server).

(2) Unzip the firmware file and put all of them under the root/phone directory of the FTP Server.

(3) Configure the FTP Server.

- (4) Visit `ftp://192.168.0.106/phone/fw924.rom` on localhost by browser, enter username and password, and you will view upgrade file. If visiting `ftp://192.168.0.106/phone/fw924.rom` on other computer is no prompt to download `fw924.rom` file, please check the firewall (Suggest close the firewall).
- (5) Configure the Firmware Server Path in the IP Phone's web configuration page.(192.168.0.106 is FTP server)

- (6) Click the "SaveSet" and then click "Restart" in the webpage.

22.4 Upgrade through HTTPS

- (1) Install and configure an Apache HTTPS Server in local computer.
- (2) Unzip the firmware file and put all of them under the root/phone directory of the HTTPS Server.
- (3) Visit "`https://192.168.0.106/phone/fw924.rom`" on localhost by browser to verify the HTTPS Server. If visiting "`https://192.168.0.106/phone/fw924.rom`" on other computer is no prompt to download `fw924.rom` file, please check the firewall (Suggest close the firewall).
- (4) Configure the Firmware Server Path in the IP Phone's web configuration page. (192.168.0.106 is HTTPS server)

● Firmware Upgrade

PnP Active No Yes

Upgrade Mode TFTP HTTP FTP HTTPS

Firmware Server Path

Config Server Path

Allow DHCP Option

To Override Server: No Yes

AUTO Upgrade: No Yes

Check for upgrade every Minutes

Upgrade EXP Firmware No Yes

HTTP/FTP/HTTPS UserName
